MINING DISCOVERY

Drill Results, Resources & Real Scale

DECEMBER BREAKOUT

- **Kodiak Copper Delivers Maiden MPD Resource**

A district-scale copper–gold system takes shape in British Columbia.

- **Arizona Gold & Silver Hits 76.5m of Bulk-Style Mineralization**

Philadelphia Project reveals widening, stockwork-hosted gold zones.

- **Noble Plains Uranium Posts Repeated High-Success Drill Results**

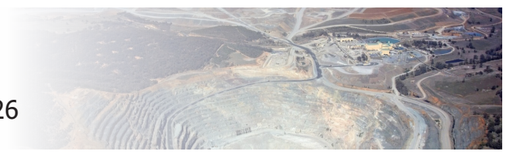
Duck Creek confirms continuity across Wyoming ISR corridors.

- **Arras Minerals Expands Berezski Trend Beyond Expectations**

New porphyry-style system discovered 1.6 km from known mineralization.

- **DigiPower X Accelerates AI Infrastructure Buildout**

GPU clusters, Tier III pods, and power capacity drive 2026 readiness.



DECEMBER SNAPSHOT

The Month at a Glance

December was a month of confirmation. Projects that spent most of 2025 drilling, mapping, and testing delivered tangible outcomes—resources, expanded systems, leadership execution, and infrastructure readiness. Across metals and mining-adjacent technology, the emphasis shifted from potential to proof.

Gold: Systems Get Bigger

Bulk-style mineralization and structural continuity dominated December gold news. Results pointed to widening envelopes, longer strike lengths, and clearer geological models—key ingredients for advancing toward resource definition and development planning.

Copper: Scale Comes Into Focus

December reinforced copper's long-cycle narrative. Resource definition and porphyry expansion highlighted how patient, methodical drilling programs are translating into district-scale assets with long-term relevance to electrification and infrastructure demand.

Uranium: Repetition Builds Confidence

Multiple December updates from U.S.-focused uranium projects underscored a critical theme: repeatability. Consistent results across drill campaigns strengthened confidence in ISR models and reinforced Wyoming's role in domestic uranium supply.

Infrastructure: Mining Meets Compute

Beyond traditional mining, December also spotlighted the growing overlap between resource regions and digital infrastructure. Power access, modular buildouts, and industrial land emerged as strategic assets—reshaping how value is created alongside metals.

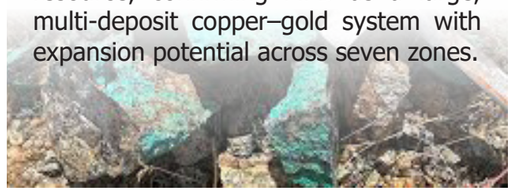
December Takeaway

This wasn't a month of hype. It was a month of validation. Projects that performed consistently in December enter 2026 with clearer direction, stronger credibility, and momentum that can be measured—not assumed.

Five Stories That Defined the Month

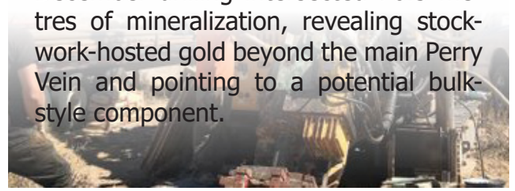
COPPER | RESOURCE DEFINED

Kodiak Copper — MPD Project (BC)
Kodiak delivered its maiden mineral resource, confirming MPD as a large, multi-deposit copper–gold system with expansion potential across seven zones.



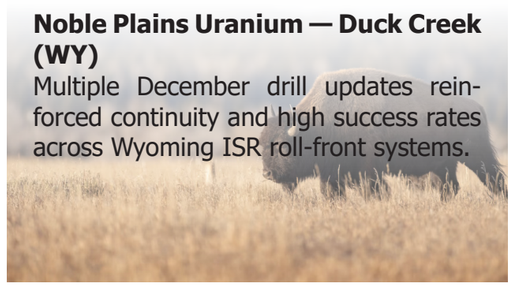
GOLD | SYSTEM WIDENS

Arizona Gold & Silver — Philadelphia Project (AZ)
December drilling intersected 76.5 metres of mineralization, revealing stockwork-hosted gold beyond the main Perry Vein and pointing to a potential bulk-style component.



URANIUM | REPEATABILITY CONFIRMED

Noble Plains Uranium — Duck Creek (WY)
Multiple December drill updates reinforced continuity and high success rates across Wyoming ISR roll-front systems.

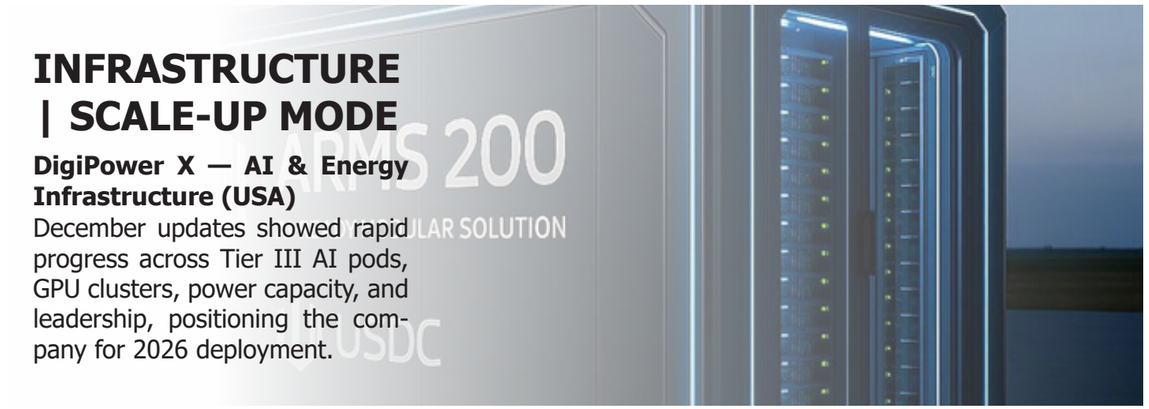


COPPER–GOLD | DISTRICT EXPANDS

Arras Minerals — Berezski Trend (Kazakhstan)
Step-out drilling and top-of-bedrock work extended the Berezski Trend, including a new porphyry-style system identified 1.6 km from known mineralization.

INFRASTRUCTURE | SCALE-UP MODE

DigiPower X — AI & Energy Infrastructure (USA)
December updates showed rapid progress across Tier III AI pods, GPU clusters, power capacity, and leadership, positioning the company for 2026 deployment.



MPD's Maiden Resource Defines a District-Scale Copper–Gold System

December marked a major inflection point for Kodiak Copper with the release of the initial Mineral Resource Estimate (MRE) for its 100%-owned MPD copper–gold project in southern British Columbia. The maiden resource confirms MPD as a large, multi-deposit system with scale, continuity, and clear expansion potential.

Resource at a Glance (December 9, 2025)

Indicated Mineral Resource

- 82.9 million tonnes grading 0.39% CuEq
- Containing 519 million lbs copper and 0.39 million oz gold

Inferred Mineral Resource

- 356.3 million tonnes grading 0.32% CuEq
- Containing 1.889 billion lbs copper and 1.28 million oz gold

The resource is distributed across seven deposits, including West, Adit, South, Gate, Man, Dillard, and Ketchan, with several zones featuring shallow mineralization favorable for open-pit development.

Why MPD Matters

The December MRE highlights MPD's defining strength: multiple deposits within a single porphyry district, offering optionality and flexibility for future mine planning. West and Adit host higher-grade mineralization from surface, while South represents a large bulk-tonnage system extending over one kilometre and remaining underexplored.

Sensitivity analyses using lower cut-off grades demonstrate materially higher tonnages and in-situ metal, underscoring MPD's potential to grow well beyond the current resource envelope as drilling continues.

What Comes Next

Kodiak's 2026 focus will center on resource expansion drilling, testing underexplored targets across the MPD property, and advancing technical work to support future economic studies. All deposits remain open for expansion in multiple directions and at depth, reinforcing MPD's long-term growth profile.

DECEMBER FACT CHECK

What December Actually Confirmed

December separated momentum from noise. Across copper, gold, uranium, and infrastructure-linked assets, the strongest updates shared one trait: repeatable, measurable progress. Projects advanced through resources, widened mineralized systems, or demonstrated consistent operational execution.

This month wasn't defined by speculation. It was defined by outcomes—maiden resources, structural expansion, repeated drill success, and infrastructure readiness that can be verified, modeled, and built upon heading into 2026.

How the Data Across This Issue Connects

The stories featured throughout this issue point to a common shift in the mining sector. Copper moved from drilling to definition. Gold projects transitioned from narrow veins to broader systems. Uranium teams proved ISR continuity through repetition. Infrastructure players demonstrated real-world execution in power and compute.

Together, these data points reflect an industry rewarding scale, clarity, and execution over early-stage promise. December's results don't stand alone—they align, reinforce, and set a measurable baseline for what credible progress looks like going forward.

ARIZONA GOLD & SILVER

ARIZONA GOLD & SILVER INC.

Philadelphia Project Enters a System-Scale Phase

December Drilling Shift

December drilling at the Philadelphia Project expanded Arizona Gold & Silver's narrative beyond a single vein, highlighting envelopes and confirming presence of stockwork gold mineralization.

Geological Continuity

Results showed gold mineralization extending outside the Perry Vein, demonstrating continuity within altered host rocks and reinforcing interpretations of a wider, system-scale gold-bearing environment locally.

Strategic Implications

By shifting focus toward system geometry rather than isolated veins, December data supports drill targeting, improved modeling, and clearer pathways toward defining scale over time.

Philadelphia Project Evolution

- Bulk-style mineralization identified outside the Perry Vein
- Stockwork and breccia zones confirmed in December drilling
- System-scale continuity strengthened geological confidence
- Expanded targeting potential for future drill programs

Mike Stark

President, CEO, and Director of Arizona Gold & Silver

CEO SPOTLIGHT

Leading the Shift From Veins to Systems

Strategic Direction
Mike Stark's December strategy emphasizes system-scale understanding, guiding Arizona Gold & Silver beyond narrow vein exploration toward broader geological interpretation and disciplined, model-driven drilling programs.

Technical Leadership
Under Stark's leadership, the Philadelphia Project's December results were framed through geological context, prioritizing continuity, mineralization style, and structural relationships over isolated intercept-focused narratives.

Execution Mindset
Stark continues positioning the company for methodical advancement, aligning exploration decisions with long-term scale potential, technical validation, and clear next-phase drilling objectives.

LEADERSHIP SPOTLIGHT — DECEMBER

- Strategic Shift — Focus moved from single-vein targets to system-scale exploration models.
- Data Discipline — December results interpreted through continuity and geological context.
- Project Clarity — Clear exploration direction established for upcoming drill campaigns.
- Long-Term Vision — Emphasis on building scale methodically, not chasing short-term headlines.

> *"December's results reinforced our focus on understanding the full mineralized system rather than isolated structures. Building a clear geological model is essential for advancing the project responsibly and at scale."*
>
> *— Mike Stark, President & CEO, Arizona Gold & Silver*

NOBLE PLAINS URANIUM

NOBLE PLAINS
URANIUM CORP

Consistency Strengthens the ISR Story

December Drill Momentum

December drilling at Duck Creek delivered repeated confirmations across targeted roll front zones, reinforcing Noble Plains Uranium's in situ recovery thesis. Rather than isolated successes, results demonstrated continuity, predictable mineralization behavior, and alignment with expectations, strengthening confidence that the project's geology supports systematic advancement toward development focused decisions and planning.

Model Validation

December data continued validating Duck Creek's geological model, with drill outcomes matching predicted roll front geometry and mineralization style. This consistency reduced uncertainty, supported technical assumptions, and confirmed that exploration targeting remains accurate, providing a stronger foundation for evaluating future drilling phases and longer term ISR development pathways ahead strategically.

Execution Focus

Throughout December, Noble Plains emphasized disciplined execution, advancing Duck Creek through methodical drilling, careful data interpretation, and operational readiness. The company avoided speculative expansion, instead focusing on repeatability, regulatory alignment, and technical preparedness to ensure progress remains measured, credible, and aligned with long term development objectives under evolving market conditions.

Project Snapshot — Elora Trend

- Repeatability — December drilling reinforced consistency across targeted ISR zones.
- Geological Confidence — Results aligned closely with Duck Creek's established roll-front model.
- Operational Discipline — Focus remained on execution, not headline-driven exploration.
- Strategic Positioning — Duck Creek advanced as a credible U.S. uranium development asset.

Drew Zimmerman

President, CEO & Director of Nobel Plains Uranium Corp.

CEO SPOTLIGHT

Discipline, Repeatability, and Execution in U.S. Uranium

Leadership Context

December reflected Drew Zimmerman's disciplined leadership approach, reinforcing ISR-focused advancement, prioritizing data quality, repeatability, and alignment between geological interpretation and operational planning at Duck Creek.

Strategic Direction

Zimmerman emphasized consistency over isolated success, framing December drilling as confirmation that targeting, modeling, and execution are aligned to support responsible advancement and long-term project flexibility.

Operational Philosophy

December messaging highlighted methodical progress, technical validation, and regulatory readiness, positioning Duck Creek to advance credibly as U.S. uranium demand and policy support continue strengthening.

LEADERSHIP SPOTLIGHT — DECEMBER

- Execution First — Emphasis placed on disciplined advancement rather than aggressive expansion.
- Model Confidence — December results reinforced trust in ISR geological assumptions.
- Regulatory Awareness — Leadership maintained alignment with permitting and compliance pathways.
- Long-Term View — Decisions framed around sustainable development, not short-term market reactions.

> *"Our focus in December was on consistency and execution. Building confidence through repeatable results and disciplined planning is essential as we advance Duck Creek responsibly."*
>
> *— Drew Zimmerman, Chief Executive Officer, Noble Plains Uranium*

ARRAS MINERALS

ARRAS MINERALS CORP.

Berezski Trend Expansion Redefines District Potential

Arras Minerals delivered a pivotal December update confirming that the Berezski Trend extends well beyond previously defined limits—introducing a new porphyry-style system and reinforcing Elemes as a district-scale copper–gold opportunity.

December Expansion

December drilling expanded the Berezski Trend footprint, identifying mineralization beyond known zones and revealing a newly recognized porphyry-style system approximately 1.6 kilometres from Berezski Central.

Geological Implications

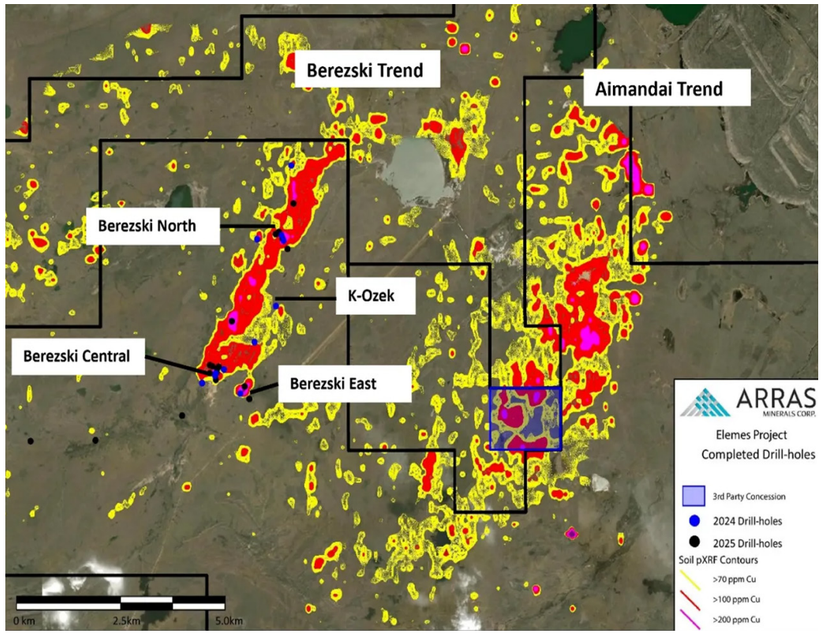
December results support interpretation of multiple mineralized centers at Elemes, with geophysical responses and alteration patterns reinforcing a district-scale porphyry model rather than an isolated system.

Why This Matters

By extending mineralization and defining new porphyry targets, Elemes shifts toward district-scale optionality, supporting flexible drill targeting, systematic growth, and long-term exploration planning focused on scale.

PROJECT SPOTLIGHT — DECEMBER

- Trend Expansion — Berezski mineralization confirmed beyond previously defined boundaries.
- New System — Porphyry-style target identified 1.6 km from Berezski Central.
- District Scale — Evidence supports multiple mineralized centers across Elemes.
- Exploration Strategy — Systematic, data-driven approach continues to unlock concealed potential.



DIGIPOWER X — ENERGY & AI INFRASTRUCTURE

From Mining-Grade Power to Compute-Scale Execution

December activity at DigiPower X reflected steady execution rather than headline-driven announcements. The company continued aligning power access, modular infrastructure, and organizational capacity to support scalable AI compute development. This progress reinforced its positioning at the intersection of industrial energy assets and next-generation digital infrastructure.

Power Foundation
Industrial-scale power access anchors DigiPower X's infrastructure strategy, enabling reliable operations, scalable expansion, and readiness for energy-intensive AI workloads.

Modular Approach
Containerized modular systems accelerate deployment timelines, improve scalability, reduce capital intensity, and provide flexibility compared with hyperscale data center construction.

Execution Focus
December activity prioritized operational delivery, infrastructure readiness, disciplined planning, and measurable progress rather than speculative announcements or conceptual positioning narratives.

Infrastructure Alignment
Assets are positioned for high-density AI compute, emphasizing reliable power, efficient cooling, modular scalability, and operational resilience across deployment environments.

Long-Term Vision
Strategy aligns with sustained, multi-year AI demand growth, supporting phased expansion, capital discipline, and durable infrastructure value creation over time.

Bridging Energy and Compute

DigiPower X's December positioning highlights a broader shift across the sector, where mining-grade power, land, and industrial expertise are being repurposed to support AI infrastructure. This convergence reflects how traditional resource-linked assets are increasingly enabling digital-scale growth beyond conventional mining applications.

CEO SPOTLIGHT

Leadership Context
Michel Amar's December leadership centered on execution, aligning power access, modular infrastructure, and organizational readiness to support scalable AI compute development.

Strategic Emphasis
Amar emphasized disciplined buildout over speculation, focusing on infrastructure that can be deployed, powered, and expanded efficiently as AI demand accelerates.

> ***"Real infrastructure progress comes from execution. Power, modularity, and reliability are what turn AI demand into deployable capacity."***
> ***— Michel Amar, CEO, DigiPower X***

Operational Lens
December decisions reflected a practical mindset—prioritizing delivery timelines, asset readiness, and reliability required for energy-intensive, high-density compute environments.

Leadership Spotlight — December

- Execution First — Focus on build-ready infrastructure rather than conceptual announcements.
- Power-Centric — Energy access treated as a primary competitive advantage.
- Scalable Design — Modular systems enable faster, flexible growth.
- Long Horizon — Strategy aligned with sustained AI infrastructure demand.

Michel Amar
CEO of DigiPower X

MINING DISCOVERY: WHERE DATA DRIVES DECISIONS

Mining Discovery delivers verified global mining intelligence across gold, silver, copper, uranium, energy, and digital mining—tracking scale, execution, infrastructure, and market signals that shape real outcomes.

- Global mining news, verified insights
- Gold, copper, silver, uranium coverage
- Infrastructure and Bitcoin mining trends
- Execution-focused analysis, not speculation

COMPANY UPDATES

Not Loud. Not Flashy. Just Progress.

December's corporate updates didn't chase headlines — they strengthened foundations. Across governance changes, land acquisitions, geological refinement, and operational continuity, companies focused on readiness rather than reaction. These moves may appear incremental, but together they form the infrastructure that supports future drilling, development, and capital alignment into 2026.

Themes of December

Governance Strengthening

Land & Project Positioning

Geological Refinement

Operational Continuity

THE UPDATE GRID

🟡**Loyalist Exploration**

Timmins Positioning

Leadership and corporate actions in December supported continued positioning within Ontario's Timmins district ahead of future exploration activity.

🟢**Dryden Gold**

Elora Trend Advancement

December work focused on geological refinement and structured planning across the Elora Trend, reinforcing systematic exploration progress.

🔵**Aurion Resources**

Finland Focus

Aurion maintained steady December momentum across Finnish gold targets through disciplined exploration strategy and long-term planning.

🟠**Astra Exploration**

Portfolio Execution

December updates reflected continued methodical advancement across Astra's gold–silver project portfolio without deviation from technical priorities.

🟣**Gold Hunter Resources**

Exploration Continuity

Gold Hunter's December activity reinforced steady exploration execution aligned with structured, data-driven advancement strategies.

⚫**Scorpio Gold**

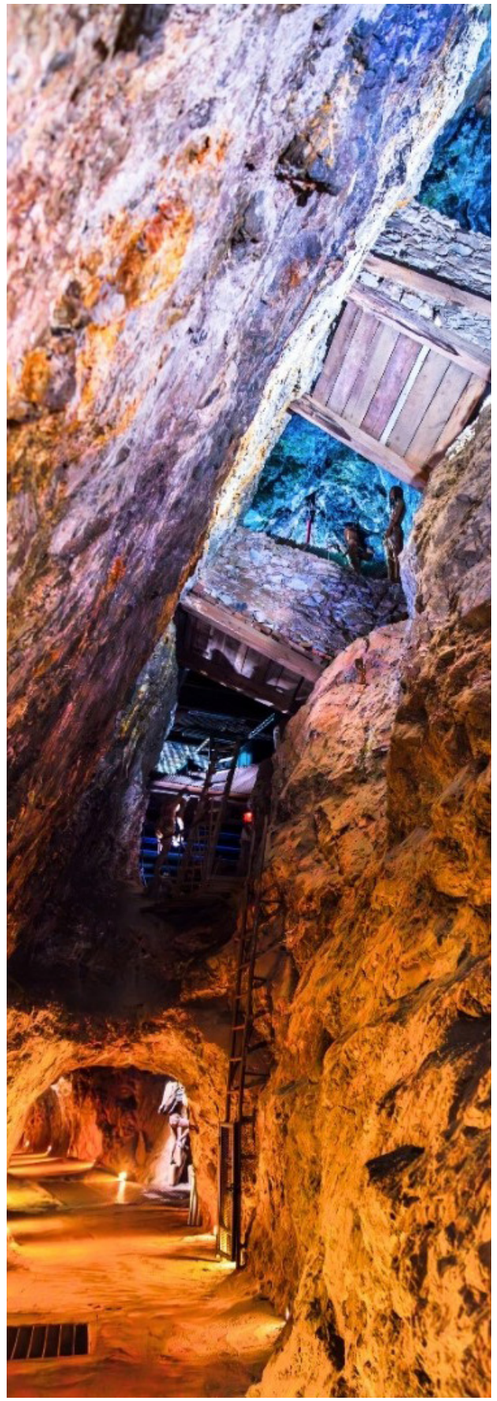
Nevada Progress

December updates highlighted continued focus on Nevada assets, emphasizing project readiness and development-oriented planning.

🟡**Guanajuato Silver**

Operational Stability

December reporting emphasized operational continuity and asset management across the company's Mexican silver operations.



DECEMBER SIGNALS

What the Industry Communicated Without Saying It

SCALE > SPEED

What the data showed:

Projects demonstrating scale expansion, continuity, and resource definition carried more weight than fast, isolated drill hits.

REPEATABILITY WINS

What the data showed:

Consistent drill outcomes and repeatable geological results mattered more than one-off successes, especially across uranium and system-scale gold projects.

EXECUTION IS THE FILTER

What the data showed:

Companies emphasizing disciplined execution, model validation, and readiness advanced credibility while speculative narratives faded into the background.

INFRASTRUCTURE = VALUE

What the data showed:

Power access, modular design, and land readiness emerged as strategic assets, positioning infrastructure-focused companies alongside traditional mining value drivers.

Less noise. More proof. December rewarded clarity, scale, and readiness.

PRIMARY ACTIVITY ZONES

United States — Gold, Uranium & Infrastructure

- U.S. Gold Corp — Wyoming gold–copper development momentum
- Noble Plains Uranium — Wyoming ISR drilling continuity at Duck Creek
- DigiPower X — AI infrastructure and power-aligned assets

Canada — Gold & Copper Growth Corridor

- Kodiak Copper — MPD copper–gold resource defined in British Columbia
- Dryden Gold — Elora Trend geological refinement in Ontario
- Loyalist Exploration — Timmins district gold expansion

Kazakhstan — Emerging Copper District

- Arras Minerals — Berezski Trend expansion and new porphyry-style discovery

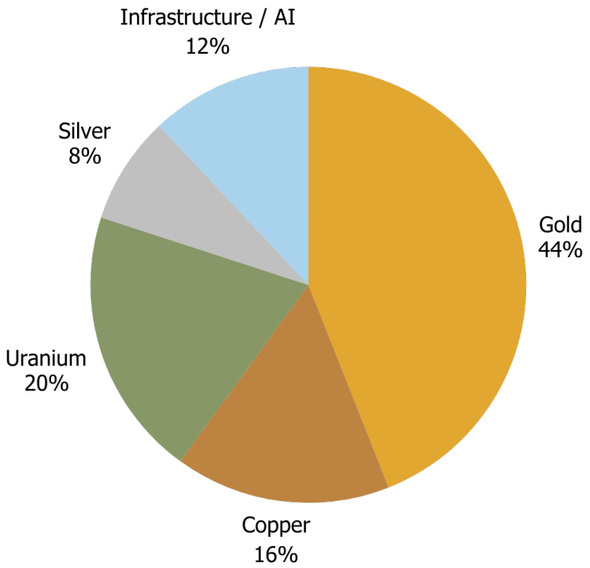
Finland — European Gold Focus

- Aurion Resources — Continued advancement across Finnish gold targets

December's activity clustered in politically stable jurisdictions where scale, continuity, and infrastructure readiness converged.

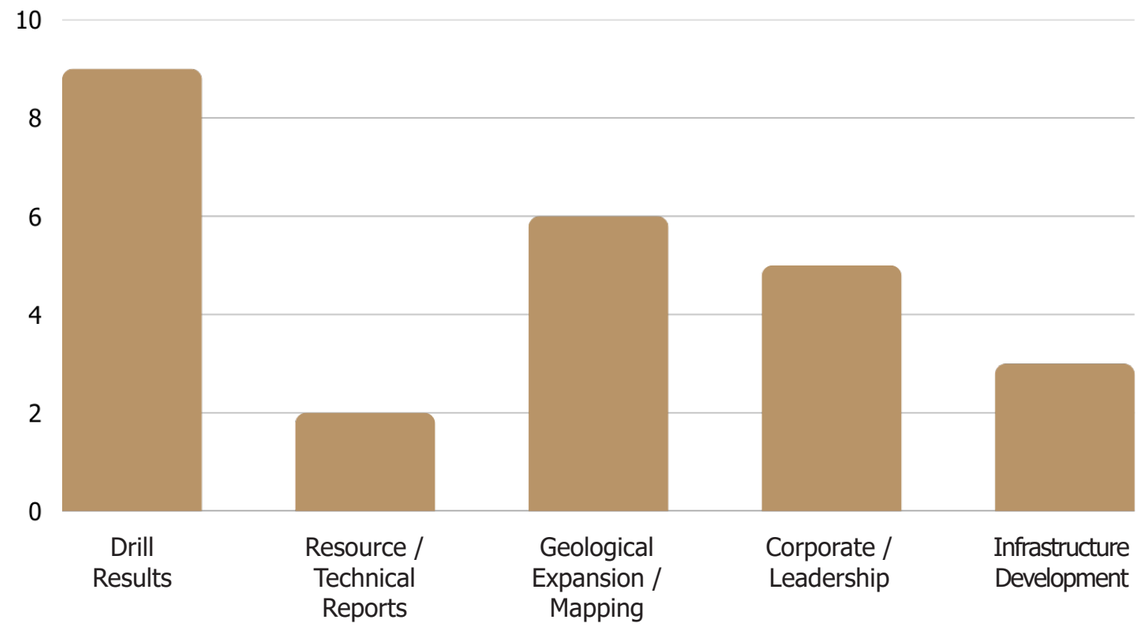
DECEMBER METRICS

December by Commodity

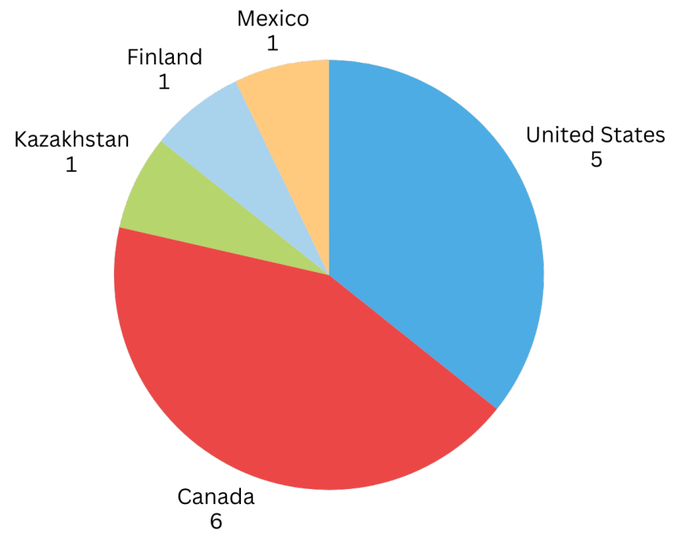


- Exploration validation dominated December activity across gold, copper, uranium projects globally.
- System expansion and continuity outweighed isolated drill hits in investor relevance.
- United States and Canada remained the most active jurisdictions this month.
- Advanced exploration and resource definition stages gained strongest December representation.
- Infrastructure and AI-linked updates emerged alongside traditional mining disclosures.
- December data favored execution, scale, and repeatability over speculative announcements.

Distribution of December Technical and Corporate Updates

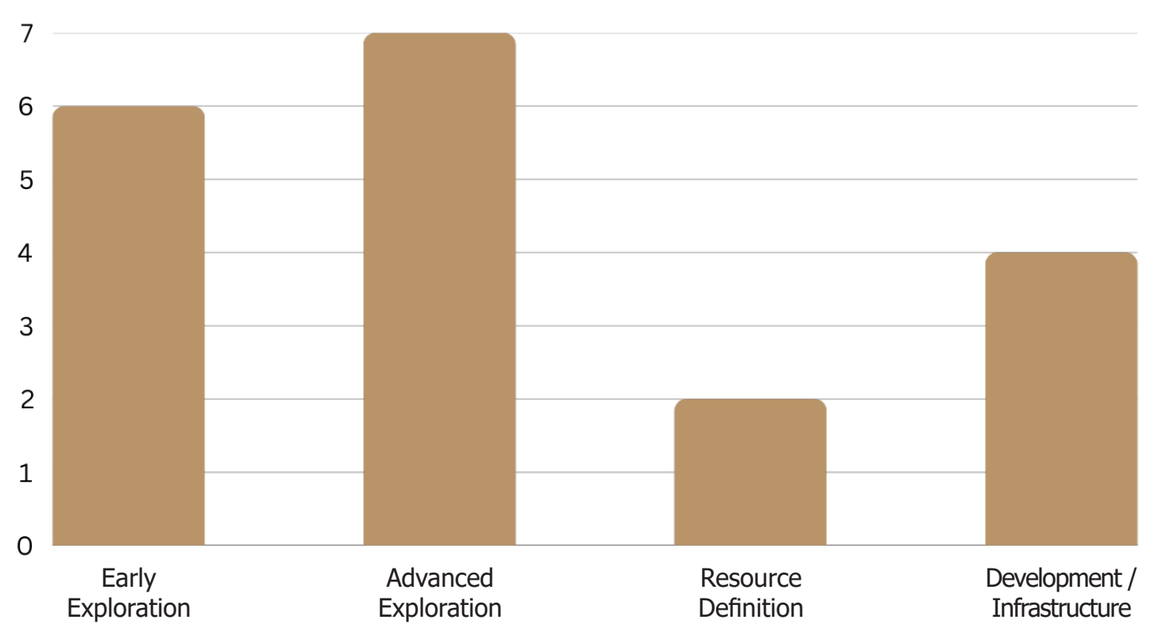


December by Region



- United States and Canada dominated December activity across multiple exploration stages.
- North America remained the primary hub for active mining projects.
- Advanced exploration represented the strongest concentration of December-stage activity.
- Early-stage exploration continued supporting future pipeline development across regions.
- Resource definition remained selective, reflecting higher technical and reporting thresholds.
- Infrastructure and development projects showed steady but disciplined December progress.

December Representation Across Project Stages



GOLD FOCUS

December Confirmed a Shift Toward Systems, Not Single Hits

December gold updates reflected a clear shift in exploration strategy. Companies emphasized continuity, mineralized envelopes, and structural context rather than isolated high-grade veins. This system-driven approach strengthens geological confidence, improves modeling, and supports longer-term pathways toward resource definition and development planning across multiple jurisdictions.

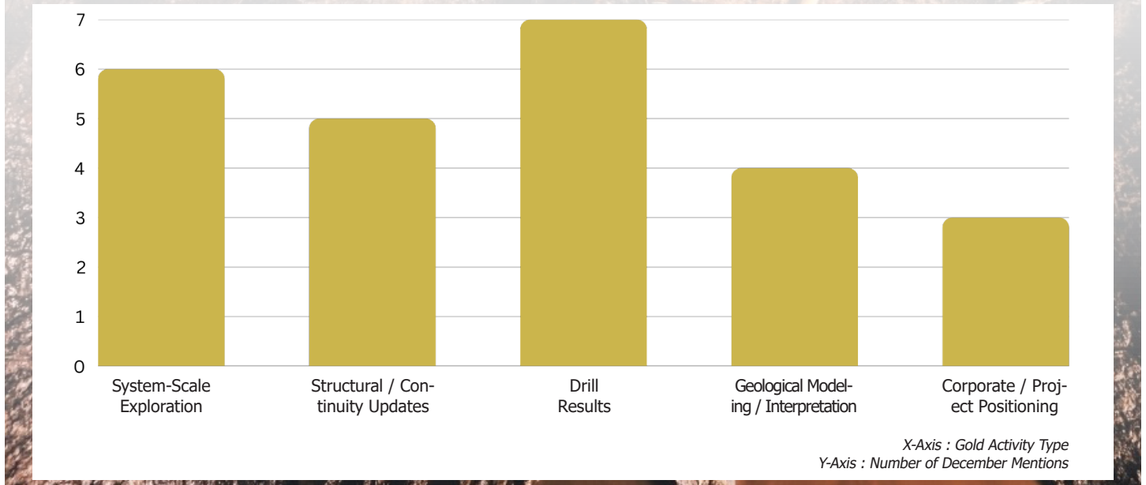
What changed in December

System-Scale Thinking
Gold exploration increasingly focused on stockwork zones, altered host rocks, and broader envelopes that extend beyond traditional vein boundaries.

Continuity Over Headlines
Repeated mineralization and geological consistency mattered more than one-off intercepts, reinforcing disciplined, model-based exploration approaches.

DECEMBER GOLD

- **Exploration Style** — Broader systems replaced narrow vein-centric targeting strategies.
- **Geological Confidence** — Structural continuity strengthened interpretation and project credibility.
- **Project Maturity** — Several assets advanced toward clearer resource-definition pathways.
- **Jurisdiction Focus** — North America remained the dominant region for December gold activity.
- **2026 Setup** — December groundwork positioned gold projects for structured next-phase drilling.



URANIUM FOCUS

December Reinforced ISR Confidence Through Repeatability

December uranium updates emphasized consistency and execution. ISR-focused projects delivered repeatable results aligned with geological models, strengthening confidence in roll-front continuity and development readiness. Rather than isolated outcomes, the month highlighted predictable performance—an essential factor as U.S. domestic uranium supply regains strategic importance.

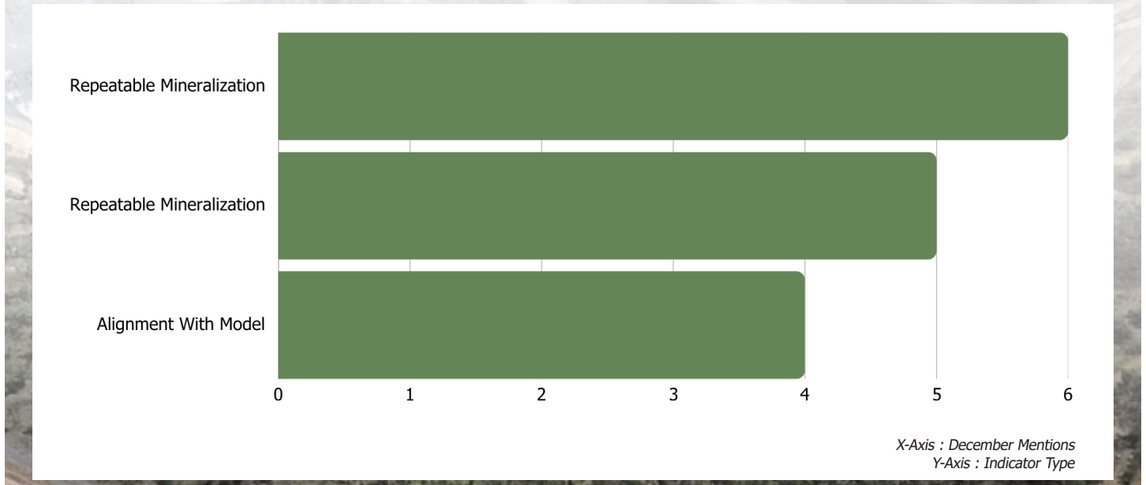
What stood out in December

Repeatability as Proof
Multiple December disclosures showed drilling outcomes aligning with expected roll-front geometry, reinforcing confidence in ISR assumptions and reducing geological uncertainty.

Execution Over Expansion
Companies prioritized disciplined advancement, data validation, and regulatory alignment instead of aggressive step-outs, signaling maturity in project development strategies.

DECEMBER URANIUM

- **ISR Validation** — Roll-front models held up across repeated December drilling updates.
- **Operational Discipline** — Focus remained on execution, not speculative expansion narratives.
- **Jurisdiction Strength** — U.S. assets continued attracting attention amid supply security priorities.
- **Project Readiness** — December results supported structured progression toward future development stages.
- **Market Context** — Policy and supply dynamics favored credible, execution-ready uranium projects.



COPPER FOCUS

December Was About Definition, Not Discovery

December copper updates highlighted a transition from exploration toward definition. Resource estimates and porphyry expansion confirmed that patient, systematic drilling is delivering scale. Rather than chasing new targets, companies focused on consolidating known systems, improving confidence, and establishing foundations required for long-term development in stable jurisdictions.

What stood out in December

From Drilling to Definition

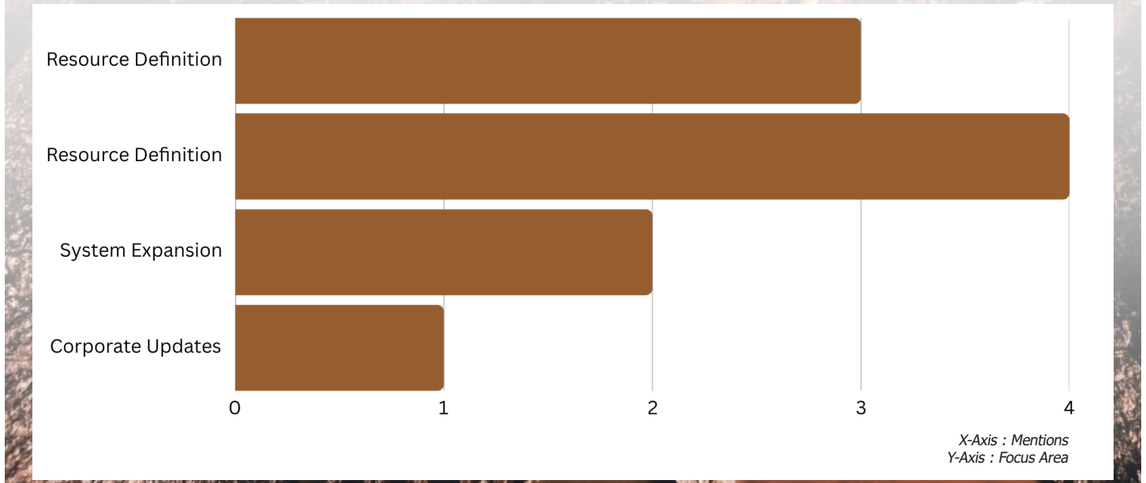
Copper stories shifted toward mineral resource estimates and system consolidation, signaling maturity across select projects.

Porphyry Systems Take Center Stage

December reinforced the importance of large, long-life porphyry systems capable of supporting future infrastructure-driven demand.

DECEMBER COPPER

- **Resource Milestones** — December featured copper projects reaching formal definition stages.
- **System Scale** — Porphyry footprints continued expanding beyond initial discovery boundaries.
- **Technical Confidence** — Geological models strengthened through density of drilling and consistency.
- **Jurisdictional Stability** — Focus remained on regions with established mining frameworks.
- **Long-Term Relevance** — Copper's role in electrification underpinned December project momentum.



TECHNOLOGY & INFRASTRUCTURE

When Mining-Grade Assets Power the Digital Economy

December highlighted a clear convergence between mining and digital infrastructure. Power access, industrial land, and modular construction—traditionally mining strengths—are now enabling scalable AI compute deployment. This shift reframes value creation: geology still matters, but execution-ready infrastructure increasingly determines speed, flexibility, and long-term competitiveness.

What stood out in December

Power as a Strategic Asset

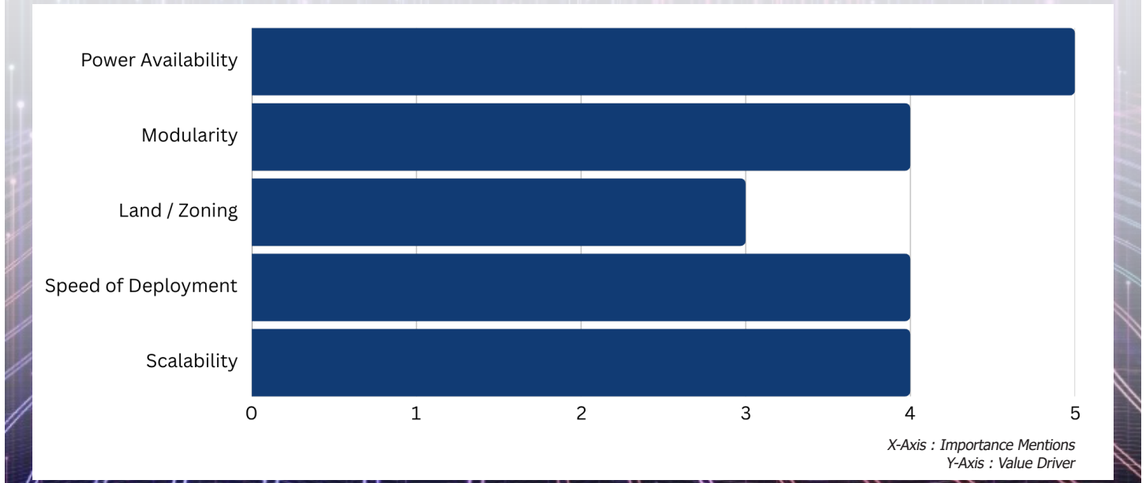
Reliable, high-capacity power emerged as the primary bottleneck—and advantage—for infrastructure-led growth tied to AI compute.

Modular Beats Monumental

Containerized systems outperformed traditional mega-builds by reducing timelines, capital intensity, and deployment risk.

DECEMBER INFRASTRUCTURE

- **Energy First** — Power availability now dictates where digital infrastructure can scale.
- **Modularity Wins** — Prefabricated pods enable rapid, phased deployment.
- **Land Advantage** — Industrial and mining-adjacent sites reduce zoning friction.
- **Execution Focus** — December progress emphasized delivery over conceptual narratives.
- **Cross-Sector Value** — Mining assets increasingly underpin non-mining revenue streams.



www.miningdiscovery.com

MARKET PULSE

December Set the Tone for What Comes Next

December marked a transition month where preparation overtook promotion. Across mining and infrastructure, markets responded to clarity, execution, and system-scale progress rather than aggressive announcements. The month functioned as a positioning phase, allowing companies to enter January 2026 with stronger technical footing, clearer strategies, and reduced uncertainty around near-term priorities.

Execution Over Excitement

Markets favored companies demonstrating delivery, repeatability, and discipline instead of speculative exploration narratives.

Scale Became the Filter

Projects showing district-scale potential or defined systems attracted more attention than isolated results.

Uranium Led Confidence

ISR consistency and U.S. supply relevance positioned uranium as December's strongest conviction sector.

Infrastructure Gained Ground

Power access and modular readiness elevated infrastructure from support role to value driver.

Positioning, Not Acceleration

December reflected strategic alignment rather than aggressive growth deployment.

> *"December wasn't about speed — it was about sharpening strategy and reducing execution risk."*
>
> *"Projects that clarified scale and direction in December enter January with a measurable advantage."*
>
> *"Early 2026 momentum will favor execution-ready assets, not speculative exploration stories."*
>
> *"January rewards preparation; December is where that preparation quietly happens."*

Sector	December Positioning Score	January 2026 Readiness Level	Primary Driver
Gold	3.8	Moderate–Strong	System-scale exploration, continuity
Copper	4.1	Strong	Resource definition, scale clarity
Uranium	4.5	Strongest	ISR repeatability, U.S. supply focus
Infrastructure / AI	4.3	Strong	Power access, modular execution
Market Overall	4.0	Strong	Execution, preparation, discipline

Scale: 1–5 | Editorial positioning index based on December disclosures, not price forecasts

DECEMBER PERSPECTIVE

Preparation Was the Real Progress

December functioned as a calibration phase for the mining and infrastructure sector. Companies prioritized clarity over speed, refining geological models, strengthening execution plans, and aligning operational priorities. Rather than pushing announcements, December rewarded disciplined preparation, allowing projects to enter January 2026 positioned with stronger confidence, reduced uncertainty, and clearer development pathways.

Looking Ahead to January 2026

January 2026 is expected to reflect the benefits of December's restraint. Projects that used year-end to validate assumptions, secure readiness, and align strategy are likely to move faster, communicate more clearly, and attract attention through execution rather than speculation.

Execution Readiness

Projects entered January with refined operational plans, clearer execution timelines, aligned technical teams, and stronger preparedness, allowing early-year activity to progress efficiently without delays caused by unresolved planning gaps.

Scale Clarity

December work clarified system-scale potential across multiple projects, replacing fragmented exploration narratives with coherent geological models that better communicate size, continuity, and long-term development relevance.

Market Discipline

Investor sentiment increasingly rewarded transparency, repeatability, and disciplined progress, favoring companies that demonstrated realistic planning and credible execution over aggressive projections or speculative growth narratives.

Infrastructure Integration

Power access, modular deployment strategies, and industrial land positioning continued integrating with mining development, expanding how value is created beyond traditional resource extraction models.

GLOBAL THEMES & SIGNALS

Global Signals

December revealed a global mining sector increasingly driven by discipline and preparation. Across commodities, companies focused on validating scale, strengthening execution, and aligning infrastructure rather than accelerating activity. These signals consistently pointed toward readiness as the defining advantage entering January 2026, replacing speculative momentum with measurable progress and strategic clarity.

68%
Execution-Focused Updates
December disclosures emphasizing delivery, definition, and readiness

72%
System-Scale Exploration
Projects highlighting continuity, scale, or district-level potential

Global Themes

The dominant themes of December centered on transition rather than acceleration. Exploration matured into definition, infrastructure moved from support to strategy, and execution emerged as the primary credibility filter. These themes appeared consistently across gold, copper, uranium, and technology-linked assets, reinforcing a sector-wide shift toward disciplined, long-term value creation.

Summary

December functioned as a strategic reset, allowing companies to refine models, confirm assumptions, and reduce uncertainty before entering the next operational cycle.

The companies best positioned for early 2026 momentum were those prioritizing clarity, scale, and execution rather than speed or speculative expansion.

IMARC INTERNATIONAL MINING AND RESOURCES CONFERENCE+EXPO

IMARC 2026: WHERE THE GLOBAL MINING INDUSTRY CONNECTS

27–29 October • ICC Sydney

The premier gathering place for mining leaders, innovators, and investors worldwide. 500+ exhibitors, 450+ industry-leading speakers, and delegates representing 120+ countries, all converging to shape the future of mining, technology, sustainability, and investment.

WHY ATTEND

- Discover next-generation mining technologies
- Explore worldwide project opportunities
- Connect with investors & industry decision-makers
- Engage in high-level networking & deal-making

Don't miss mining's biggest stage

Learn more at imarcglobal.com

Mining Discovery
A Product Of Midis Resources Private Limited

MINING DISCOVERY: JANUARY EDITION

FOLLOWING A DECEMBER DEFINED BY RESOURCES, REPEATABILITY, AND READINESS, THE NEW YEAR OPENS WITH PROJECTS MOVING FROM PREPARATION INTO MEASURABLE PROGRESS.

- Gold — System-scale exploration advances as projects transition from envelopes to definition
- Copper — District-scale porphyry systems move deeper into technical and economic clarity
- Silver — Development-stage assets sharpen focus on continuity, scale, and jurisdictional strength
- Uranium — ISR projects convert repeatable drill success into development pathways
- Bitcoin & Digital Mining — Power access, energy economics, and infrastructure discipline shape next-cycle mining profitability
- Mining + Infrastructure — Where land, power, and execution-ready assets unlock multi-sector value

Step into 2026 informed and ready.
