MINING DISCOVERY

From Positioning to Execution

INSIDE THIS ISSUE

Exploration & Development

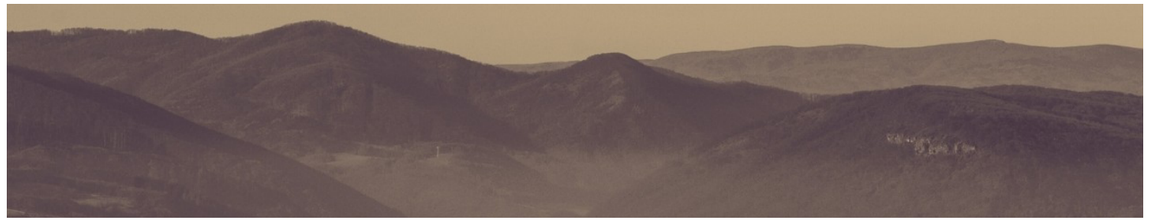
- **Arras Minerals**
Copper exploration expansion and drilling progress at Elemes project
- **Arizona Gold & Silver**
Leadership update and continued advancement at Philadelphia gold project
- **Astra Exploration**
Expanding exploration programs targeting new precious metals discoveries
- **Phenom Resources**
trategic uranium exploration positioning across key North American districts
- **Loyalist Exploration**
Early-stage exploration targeting gold systems within Canadian jurisdictions
- **Dryden Gold**
Structural drilling refining gold mineralization across Ontario greenstone belts
- **Scorpio Gold Corp.**
Nevada gold exploration programs advancing through systematic drilling campaigns
- **West Red Lake Gold**
Development progress within Canada's historic Red Lake district
- **Kodiak Copper**
Copper exploration strengthening geological model across British Columbia targets
- **Power Metallic**
Expanding mineralized footprint through step-out drilling at Lion Zone
- **Noble Plains Uranium**
Sequential drilling updates strengthening uranium targets at Duck Creek
- **Guanajuato Silver**
Operational updates across producing silver mines within Mexico
- **U.S. Gold Corp.**
Development-stage gold project progressing through engineering and permitting

Energy & Infrastructure

- **BluEnergies**
Offshore energy exploration advancing long-cycle resource development strategy
- **DigiPower X**
Energy-integrated digital infrastructure scaling to support AI compute

Sector Analysis

- **The Sector Pulse**
Overview of industry momentum shaping February mining developments
- **February Commodity Lens**
Examining commodity roles supporting energy transition and infrastructure
- **February Snapshot**
Visual overview summarizing sector activity and project distribution
- **The Global Resource Map**
Mapping global locations of companies featured in this issue
- **Global Themes & Signals**
Key global trends influencing mining investment and exploration
- **February Snapshot**
Data-driven charts illustrating sector activity during February cycle
- **Closing Perspective**
Final reflections on industry preparation and future cycle momentum



EDITOR'S NOTE

A Quiet Alignment

There are months in mining that feel loud — driven by volatility, reaction, or speculation.

February was not one of them.

Instead, it revealed something more enduring: alignment.

Across jurisdictions and commodities, companies advanced their work with steady intention. Drill rigs returned to site where prior results justified expansion. Exploration programs were refined through modern geophysics and tighter structural interpretation. Capital was secured with defined allocation rather than broad ambition. Advisory boards and executive teams were strengthened to support execution, not promotion.

In Kazakhstan, drilling resumed across a widening porphyry corridor, supported by two years of generative work. In Nevada and Ontario, gold systems were extended step by step — not through aggressive spacing, but through methodical follow-up. Uranium targets were refined with field programs designed to confirm historic data before expansion. Copper portfolios saw continuity prioritized over speed.

What stands out is the narrowing of focus.

This is not the posture of an overheated market.

It is the posture of preparation.

Mining cycles that endure rarely begin with dramatic declarations. They begin with disciplined groundwork — clearer data, realistic execution paths, and leadership aligned with infrastructure and capital.

February did not attempt to announce a new phase.

It demonstrated that one may already be forming.

ARRAS Minerals

ARRAS MINERALS CORP.

Elemes: Drilling Scales with Structure

Arras Minerals recommenced diamond drilling at its Elemes copper-gold project in northeastern Kazakhstan in February, mobilizing two rigs as part of a planned 20,000-metre 2026 program.

Current drilling is focused on the Berezski trend, following prior broad copper-gold intercepts including:

- 457.5 metres grading 0.61 g/t gold and 0.10% copper from surface
- 138.8 metres grading 0.77 g/t gold and 0.09% copper

Mineralization has been outlined over an area of roughly 600m by 500m to depths approaching 550m

From Generative Work to Targeted Follow-Up

The drilling builds on a two-year regional exploration program across approximately 1,900 sq km in Kazakhstan

That work included:

- 39,773 soil samples
- 479 top-of-bedrock holes (12,555.2m)
- 18 diamond drill holes (5,250.6m)
- Extensive geophysical surveys

The program identified three new porphyry systems along a 54km trend parallel to the Bozshakol copper-gold corridor

Selected intercepts from early drilling included:

- 14.8m at 0.13% Cu (Shirderty)
- 29.0m at 0.11% Cu (Bozshakol South)
- 34.0m at 0.25 g/t Au (Tort Kuduk)

February in Context

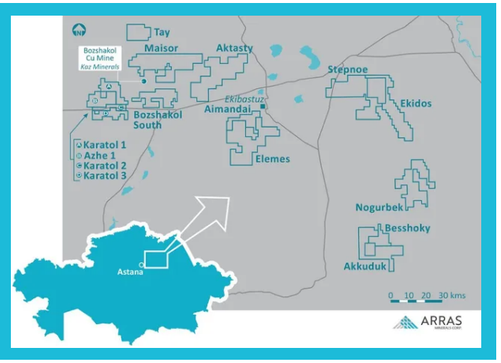
Elemes is transitioning from early delineation to expanded definition.

The regional groundwork has narrowed priority targets.

The 2026 program is designed to increase drill density, refine geometry, and test depth potential.

Measured scale.

Structured follow-through.



Arizona Gold & Silver Inc.

Strengthening Technical Oversight at a Critical Stage

February for Arizona Gold & Silver was defined by leadership reinforcement rather than new drilling headlines. The company announced the appointment of Darin Wagner as Advisor to the CEO, adding senior exploration and corporate development experience to its advisory structure.

Wagner brings more than three decades of mineral exploration experience, including involvement in discovery-driven environments and public market growth cycles. His addition signals an emphasis on technical rigor as the company advances its gold-silver portfolio.

The company also granted 200,000 stock options at $1.00 per share, aligning advisory participation with long-term project progression. This structure ties technical guidance directly to shareholder outcomes.

While February did not center on new intercept releases, it strengthened the interpretive and strategic framework that underpins future drilling.

February Highlights

- Advisory appointment announced
- Senior exploration expertise added
- 200,000 stock options granted at $1.00
- Continued advancement of the Philadelphia gold-silver project

Strategic Context

Exploration companies often reach inflection points where governance depth becomes as important as drill results.

Strong technical oversight improves structural interpretation and reduces geological missteps before capital intensity increases.

Advisory appointments at this stage typically reflect preparation for expanded activity rather than reaction to volatility.

In discovery-driven systems, interpretation quality determines continuity and scale potential.

February suggests Arizona Gold & Silver is reinforcing its internal foundation before accelerating outward.

Astra Exploration

High-Grade Signals, Expanding Context

February delivered one of the month's most striking precious metals intercepts.

Astra reported results including 1,286 g/t silver and 9.0 g/t gold over 3.1 metres, reinforcing the presence of high-grade mineralization within its expanding system.

The interval adds to a growing body of drill data that suggests the company is not testing isolated veins, but working within a structurally coherent precious metals environment. The current focus appears to be on defining continuity — stepping outward from high-grade zones while refining geological controls through mapping and follow-up drilling.

Reading the System

High-grade intercepts in early-stage programs can mean many things. The critical question is always geometry.

February's results indicate:

- Strong grade concentration within defined structures
- Mineralization hosted within a broader alteration footprint
- Clear potential for step-out targeting

Rather than accelerating beyond available data, the program remains methodical — testing extensions, validating structural orientation, and building a clearer three-dimensional understanding of the system.

The Broader Implication

High-grade discoveries often attract attention quickly. What defines their longevity is continuity and scale.

Astra's approach appears centered on confirming both.

February did not attempt to declare a district.

It strengthened the case that one may be forming.

Phenom Resources

Capital Positioned for Carlin Advancement

February for Phenom centered on capital alignment.

The company announced a non-brokered private placement of up to 5,100,000 units at $0.25, targeting gross proceeds of up to $1,275,000. Each unit includes one common share and one warrant exercisable at $0.35 for four years.

Proceeds are allocated toward exploration programs and working capital — a structured funding approach tied directly to asset progression.

Phenom holds 100% of the Carlin Gold-Vanadium Project in Nevada, which hosts the Carlin Vanadium deposit.

February Highlights

- Defined raise sized for program execution
- No overextension of capital structure
- Insider participation within regulatory limits

This was not a growth announcement.
It was preparation for defined work.

February in Context

Early-stage capital raises often signal either urgency or preparation. February suggested the latter.

The financing is proportionate to program scope and aligned with defined exploration objectives. In Nevada's Carlin corridor, advancement depends on steady funding and technical continuity.

Measured capital before expanded drilling reflects discipline — not speculation.

Loyalist Exploration

Financing, Incentives, and Timmins Focus

Loyalist closed financing in February totaling $438,500, directing proceeds toward property payments and exploration expenditures in Timmins.

The company remains focused on consolidating its Timmins land position under its "Buy Timmins" strategy.

Separately, Loyalist issued RSUs and stock options under its long-term incentive plan, reinforcing alignment between leadership and future performance.

February reflected structural preparation rather than operational escalation.

February Signals

- Financing closed
- Exploration funding secured
- Incentive plan activated
- Timmins-focused advancement

Strategic Context

District-scale strategies require coordination between land, capital, and leadership.

Smaller financings tied directly to exploration suggest targeted field programs rather than broad campaigns.

Governance alignment through incentive plans reinforces internal stability during growth phases.

In mature districts, patience and consolidation often precede scale.

February reflected groundwork — not acceleration.

Dryden Gold

DRYDEN GOLD CORP

Advancing Structure in Ontario

February was an active month for Dryden Gold, with multiple updates reflecting continued drilling and geological interpretation across its Ontario land package . The company remains focused on structurally controlled gold systems within established greenstone terrain.

Rather than broadening its exploration footprint aggressively, Dryden appears to be tightening its geological model — stepping outward from known mineralization while refining structural controls. This approach suggests emphasis on continuity and geometry.

Ontario's greenstone belts are known for structurally complex gold systems, where understanding orientation and fault architecture can materially influence drilling success. February's releases indicate continued attention to these elements.

The cadence of communication reinforces program continuity — building on prior intercepts rather than redirecting exploration focus.

February Highlights

- Multiple drill-related updates issued
- Continued structural modeling refinement
- Step-out drilling from established zones
- Ontario greenstone focus maintained

Strategic Context

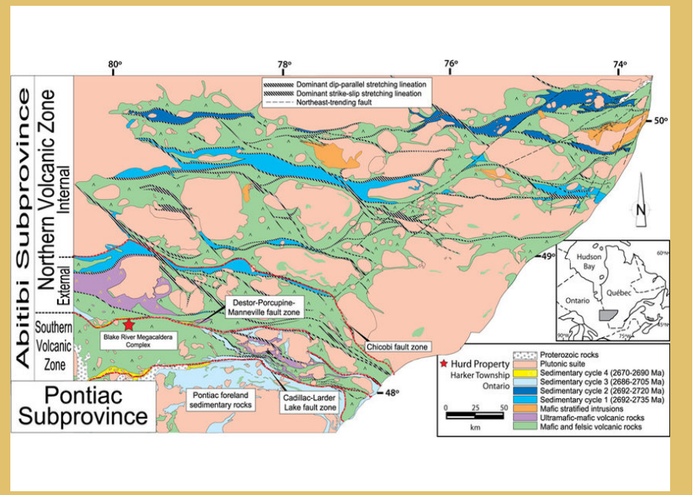
Structurally controlled gold systems require precision.

Refining geological interpretation reduces capital inefficiency before expanding drill density.

Sequential updates suggest incremental advancement rather than episodic discovery.

Ontario exploration rewards patience and continuity of model.

February reflects disciplined progression anchored in structural understanding.



Scorpio Gold Corp.

SCORPIO GOLD CORPORATION

Sustained Exploration Cadence in Nevada

February was marked by a steady stream of updates from Scorpio Gold, reflecting continued activity across its Nevada-focused gold portfolio. The frequency of communication suggests an active exploration program advancing in stages.

Nevada remains one of the most established gold jurisdictions globally, where incremental drilling and systematic evaluation often define success. Scorpio's February cadence indicates continued advancement within this framework.

Rather than introducing a new strategic pivot, the company appears to be building on existing zones — maintaining drilling continuity and refining geological understanding.

The month reflects steady execution. Progress here appears cumulative rather than episodic.

February Highlights

- Multiple operational and exploration updates released
- Continued drill progression across Nevada assets
- Ongoing evaluation of mineralized zones
- Consistent communication cadence maintained

Strategic Context

Sustained exploration activity signals internal program stability.

Regular updates during drilling phases support transparency and momentum.

In Nevada, incremental expansion of known systems often yields more durable results than rapid expansion.

February suggests Scorpio is advancing through continuity rather than volatility.

Steady rhythm, maintained over time, builds structural confidence.

West Red Lake Gold

Coordinated Advancement in the Red Lake District

February updates from West Red Lake Gold reinforced continued progression within the Red Lake district. The company's communications reflected alignment between corporate direction and operational sequencing.

Red Lake remains one of Canada's most historically productive gold camps, where development strategy requires coordination across geology, underground planning, and infrastructure utilization. February's messaging suggested continuity within this framework.

Rather than introducing expansion into new jurisdictions, the company maintained its focus on advancing defined assets within established infrastructure. This emphasis on district concentration reinforces strategic clarity.

The tone of February's updates suggests measured advancement — strengthening internal alignment before broader scale.

February Highlights

- Corporate update issued during the month
- Continued focus within the Red Lake district
- Operational sequencing reinforced
- Infrastructure alignment maintained

Strategic Context

Established gold districts reward disciplined sequencing.

Underground advancement and corporate coordination must move together to reduce operational risk.

Focusing within mature infrastructure environments can strengthen execution efficiency.

February suggests West Red Lake Gold is advancing through alignment rather than acceleration.

Consistency in district strategy often precedes durable growth.

Kodiak Copper

Advancing Copper Targets in British Columbia

February was an active period for Kodiak Copper, with multiple updates supporting continued advancement of its British Columbia copper assets. The company maintained its focus on refining porphyry-style targets within a stable mining jurisdiction.

Porphyry systems typically evolve through systematic drilling and incremental data layering. February's cadence indicates Kodiak continues to build geological confidence rather than shifting exploration direction.

British Columbia remains strategically important in the global copper landscape, particularly as electrification and grid expansion narratives intensify. Within that macro context, Kodiak's work appears disciplined and localized — grounded in target refinement.

The month reflected continuity — advancing known zones while strengthening the interpretive model that supports them.

February Highlights

- Multiple exploration updates released
- Continued porphyry target refinement
- Structured planning toward upcoming programs
- British Columbia focus maintained

Strategic Context

Porphyry copper exploration rewards patience and density.

Confidence in system scale emerges gradually through consistent drilling.

Target refinement before expansion reduces geological uncertainty.

February suggests Kodiak is progressing methodically within defined corridors.

Measured advancement often precedes durable copper discovery narratives.

Power Metallic

Expanding the Lion Zone Footprint

February updates from Power Metallic focused on continued drilling at the Lion Zone. The reported results extended mineralization through step-out intercepts, reinforcing continuity beyond previously defined zones.

Rather than broad exploration redirection, the company appears committed to systematic expansion outward from known mineralized corridors. This approach suggests confidence in geological controls guiding the program.

Sulphide systems, particularly those containing nickel and copper mineralization, demand structural clarity as footprint grows. February's communication indicates that expansion is occurring alongside interpretive refinement.

The month reflects incremental growth supported by technical discipline.

February Highlights

- Additional Lion Zone drill results released
- Step-out drilling extending mineralization
- Continued focus on structural interpretation
- Program continuity maintained

Strategic Context

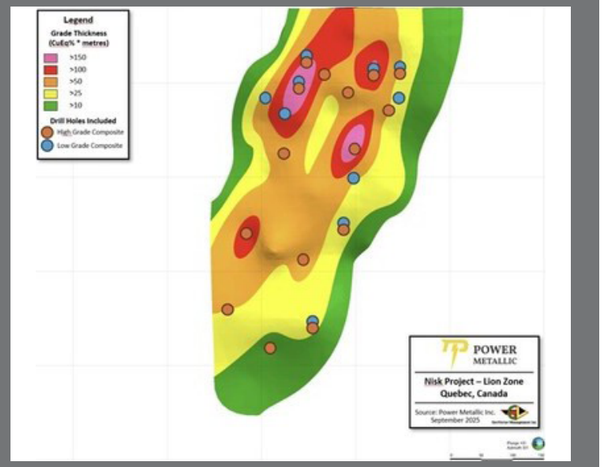
Expanding sulphide systems requires balance between scale and structure.

Footprint growth must be supported by geological coherence to reduce downstream risk.

Step-out drilling builds confidence when aligned with established models.

February suggests Power Metallic is prioritizing controlled expansion over rapid scaling.

Incremental advancement strengthens long-term system understanding.



Noble Plains Uranium

Refining Uranium Targets at Duck Creek

February brought multiple updates from Noble Plains Uranium as the company advanced work at its Duck Creek project. The company moved from historic data evaluation to reporting intercepts and consolidating final drill results.

The integration of legacy information alongside new drilling results reflects a structured exploration process. Rather than accelerating into broad new programs, the focus appears to be refining target areas within established corridors.

Uranium exploration often unfolds in stages — narrowing zones, confirming continuity, and consolidating datasets before scaling. February's reporting cadence aligns with that framework.

The month emphasized consolidation and clarity.

February Highlights

- Historic data review and integration
- Highest-grade intercept results released
- Final drill results reported
- Target refinement for follow-up work

Strategic Context

Uranium cycles reward process-driven exploration.

Sequential reporting reduces interpretive uncertainty.

Target consolidation improves capital efficiency before expansion.

February suggests Noble Plains is strengthening its geological framework.

Precision at this stage supports more confident advancement later.

Guanjuato Silver

Operational Continuity Across Mexican Assets

February reflected steady operational activity across Guanajuato Silver's Mexican portfolio . The company maintained focus on advancing work within its established mining districts rather than introducing structural changes.

Operating in mature silver-gold regions requires disciplined sequencing between underground development and processing. February's communications suggest continuity across these areas, reinforcing operational alignment.

No expansion narrative defined the month. Instead, the emphasis remained on sustaining performance within existing infrastructure.

In producing environments, steadiness often carries more weight than acceleration. February underscored that stability.

February Highlights

- Operational update issued
- Continued activity across Mexican assets
- Production alignment maintained
- Infrastructure utilization steady

Strategic Context

Producers operate within tighter operational margins than explorers. Consistency becomes the foundation of resilience.

Established districts provide infrastructure depth, but performance depends on disciplined execution.

February's posture reflects continuity rather than change.

In precious metals mining, durable progress is built through stability.

Measured advancement remains central to long-term positioning.

U.S. Gold Corp.

Advancing Development-Stage Assets in the United States

February updates from U.S. Gold Corp. centered on continued advancement of its U.S.-based gold portfolio . The company remains focused on progressing development-stage assets through structured technical and regulatory sequencing.

Unlike early-stage explorers, development companies operate within defined frameworks — engineering refinement, permitting alignment, and milestone preparation guide momentum. February's communication reflected this measured progression.

The emphasis remained on internal coordination rather than expansion into new assets. Aligning geology, engineering, and compliance is often the most critical phase before larger capital commitments are introduced.

February reinforced readiness rather than acceleration.

February Highlights

- Corporate update released during the month
- Continued development-stage progression
- Engineering and permitting sequencing maintained
- Milestone preparation ongoing

Strategic Context

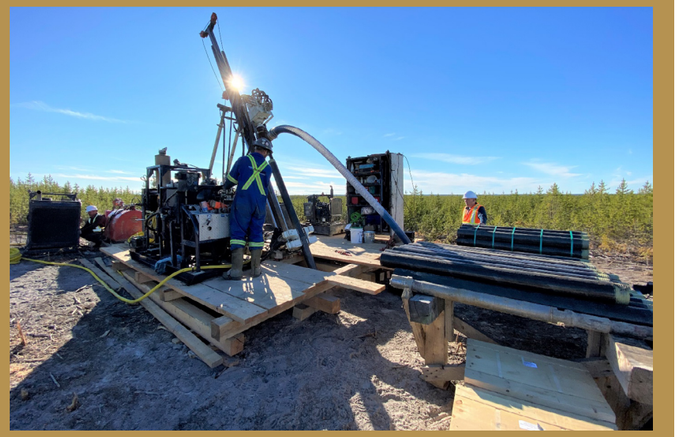
Development projects advance through order, not urgency.

Engineering clarity reduces downstream construction risk.

Permitting alignment strengthens project certainty before financing.

February suggests disciplined coordination across technical domains.

Preparedness, maintained consistently, defines sustainable development momentum.



BluEnergies Ltd.

Deepwater Positioning in a Selective Exploration Cycle

In February, BluEnergies issued a corporate update reinforcing its focus as a pure-play West Africa deepwater oil and gas explorer.

The company continues to concentrate on Cretaceous basin floor fan plays — geological settings associated with some of the most significant offshore discoveries globally. These systems require detailed seismic interpretation, structural mapping, and careful prospect maturation before drilling decisions are made.

February Highlights

- Corporate update released outlining continued strategic focus
- Ongoing positioning within high-impact deepwater plays
- Alignment with broader regional offshore exploration trend

Strategic Context

Deepwater exploration operates on longer timelines than onshore programs. Capital commitment is measured, technical validation is extensive, and partnerships often define advancement.

February did not signal immediate drilling activity. Instead, it reinforced positioning — maintaining exposure to a basin-scale opportunity during a period where major operators continue to evaluate offshore acreage in West Africa.

BluEnergies' posture reflects patience and geological conviction.

In deepwater exploration, preparation and timing often determine scale.

DigiPower X

Scaling Energy-Integrated Digital Infrastructure

February brought multiple corporate updates from DigiPower X, reinforcing its positioning within energy-integrated digital infrastructure. The company continues advancing a model that aligns power capacity with high-performance computing demand.

As AI workloads and energy-intensive compute expand globally, infrastructure availability has become a structural constraint. DigiPower X's approach centers on integrating energy solutions directly with compute facilities, reducing exposure to grid volatility and capacity limitations.

The February cadence reflected staged progression rather than abrupt expansion. Updates focused on operational and strategic alignment within existing infrastructure frameworks.

Infrastructure build-out typically unfolds in phases — power procurement, facility deployment, and compute scaling. February's communications suggest this sequencing remains intact.

February Highlights

- Multiple February corporate updates issued
- Continued focus on energy-integrated data center strategy
- Alignment with growing AI compute demand
- Staged deployment model maintained

Strategic Context

Digital infrastructure is increasingly linked to energy availability.

Compute growth without power integration can introduce cost instability.

Staged development reduces execution risk in capital-intensive sectors.

February suggests disciplined scaling rather than reactive expansion.

Sustainable infrastructure growth depends on sequencing as much as capacity.

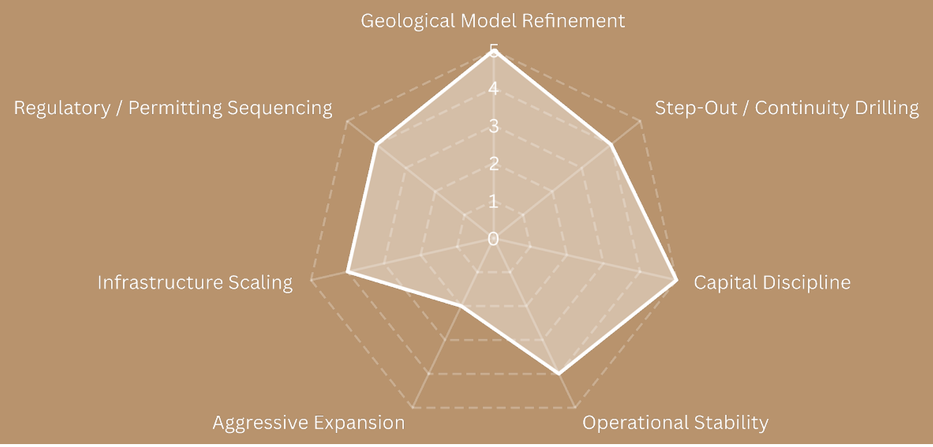
The Sector Pulse

Preparation Before Expansion

February across the mining and energy spectrum reflected discipline rather than acceleration. Exploration companies focused on extending known mineralization with tighter geological models. Development-stage assets advanced through permitting and engineering sequencing. Producers emphasized operational continuity within established districts.

The collective tone suggests a sector building structural alignment — capital sized to program scope, drilling guided by interpretation rather than speculation, and infrastructure scaling through staged deployment. Momentum appears cumulative. The groundwork is being set before scale increases.

Segment	February Focus	Strategic Direction
Gold Explorers	Step-out drilling, model refinement	Controlled expansion
Copper Explorers	Porphyry target definition	Data-density growth
Uranium Projects	Sequential drill reporting	Target consolidation
Producers (Silver/Gold)	Operational continuity	Stability & efficiency
Infrastructure / Energy	Staged deployment	Capacity alignment
Offshore Exploration	Basin positioning	Long-cycle preparation



The Underlying Shift

February did not signal acceleration.

It signaled alignment.

Across commodities, companies are strengthening foundations — geology, capital, governance, and infrastructure moving in coordination. In mining cycles, durable growth rarely begins with noise. It begins with preparation.

February Commodity Lens

The Resources Behind Global Infrastructure

The February developments highlighted throughout this edition reflect a mining sector built on interconnected commodities rather than isolated cycles. Gold exploration continues to anchor capital preservation narratives, copper remains central to electrification and grid expansion, uranium has regained strategic importance within global energy policy, and silver continues to bridge precious metal demand with industrial applications. Together, these resources represent the structural foundation supporting infrastructure, technology manufacturing, and long-term energy systems.

A System of Interconnected Resources

Modern resource development increasingly functions as a coordinated ecosystem. Precious metals provide financial stability during uncertain cycles, while base and energy metals underpin the infrastructure required for electrification, data centers, and industrial production. Exploration and development activity across these commodities reflects how the mining industry is positioning itself to supply multiple structural demands simultaneously.

Five Structural Drivers of the Mining Sector

Energy Security

Uranium and energy resources are strengthening national power stability strategies.

Electrification Expansion

Copper remains critical for grid infrastructure, renewable energy systems, and transmission.

Financial Stability Metals

Gold continues to function as a long-standing store of value during economic uncertainty.

Industrial Manufacturing

Silver and polymetallic systems support electronics, solar technology, and advanced materials.

Digital Infrastructure Growth

Energy-intensive technologies such as AI and data centers are increasing long-term mineral demand.

MINING DISCOVERY: WHERE DATA FUELS DECISION-MAKING

Mining Discovery provides validated global mining intelligence covering gold, silver, copper, uranium, energy, and digital mining. It monitors scale, execution, infrastructure, and market signals that influence tangible results.

- Comprehensive global mining news with verified insights
- Coverage of gold, copper, silver, and uranium
- Trends in infrastructure and Bitcoin mining
- Analysis focused on execution rather than speculation

February Snapshot

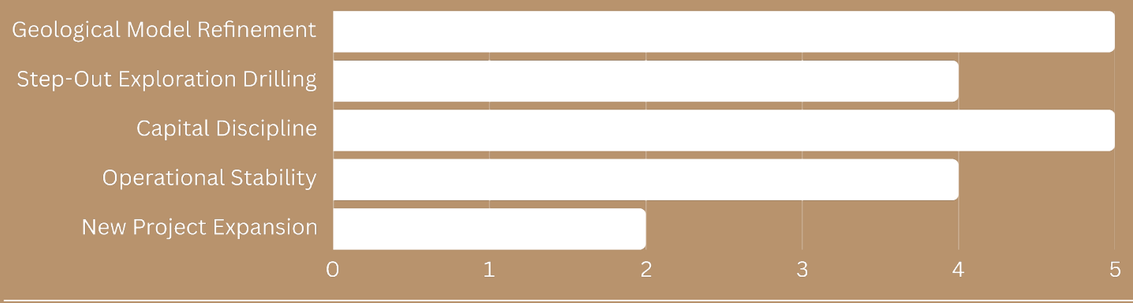
A Month of Measured Momentum

February across the mining and energy sector reflected steady progress rather than dramatic shifts. Exploration programs advanced through step-out drilling, development assets moved through engineering and permitting stages, and producing companies focused on operational stability within established districts.

Across multiple commodities — gold, copper, uranium, silver, and polymetallic systems — companies prioritized model refinement, disciplined capital deployment, and program continuity. The overall pattern suggests the sector is strengthening its foundations before larger expansion phases begin.

Category	February Activity
Companies Featured	13
Commodities Covered	Gold, Copper, Uranium, Silver, Polymetallic
Exploration Updates	Multiple drilling and technical updates
Development Progress	Engineering and permitting sequencing
Producing Assets	Operational continuity maintained

Region	Key Focus
Canada	Gold, copper and uranium exploration programs
United States	Development-stage gold assets and infrastructure
Mexico	Silver production and operational continuity
Kazakhstan	Copper exploration expansion
Offshore / Energy	Early-stage resource positioning



Five Signals from February

Exploration discipline increased

Companies focused on extending known mineralization rather than speculative expansion.

Capital deployment became more measured

Financing aligned closely with program scope.

Development assets progressed steadily

Engineering, permitting, and technical sequencing continued.

Operational districts remained stable

Producing companies prioritized continuity and efficiency.

Infrastructure themes strengthened

Energy integration and digital infrastructure continued to influence sector direction.

The February Takeaway

February did not introduce a new cycle.

It strengthened the groundwork for one.

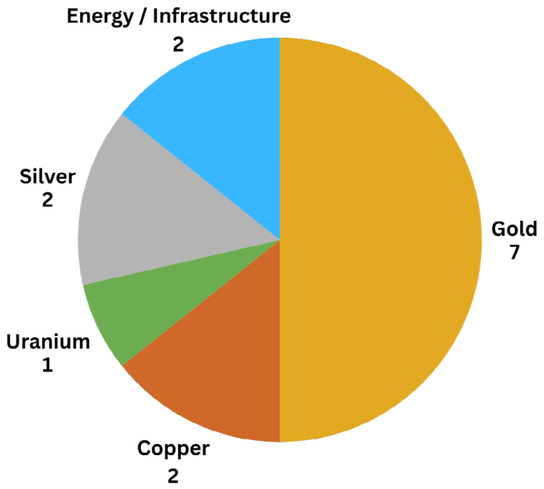
Across exploration, development, and production, the industry demonstrated a consistent theme — preparation before expansion.

The Global Resource Map

Where Exploration Meets Opportunity

Mining remains fundamentally global. Geological systems do not follow national borders, and the projects shaping future resource supply are distributed across multiple continents and jurisdictions. The companies featured throughout this edition operate across North America, Central Asia, and offshore energy environments, reflecting how mineral exploration, development, and infrastructure now form an interconnected global network.

From Canadian greenstone belts and Nevada gold districts to copper exploration in Kazakhstan and producing silver mines in Mexico, each region contributes a different geological advantage. These locations together illustrate how modern resource development depends not only on discovery, but also on stable jurisdictions, infrastructure access, and long-term operational expertise.



Commodity Distribution

The companies featured in this edition represent a diversified commodity mix led by gold exploration and development projects. Copper, uranium, and silver provide additional exposure to infrastructure, energy, and industrial demand. Together, this distribution reflects how modern mining portfolios increasingly balance precious metals stability with strategic materials essential for global electrification and economic growth.

Region	Countries	Companies Featured	Key Resources
North America	Canada	Dryden Gold, West Red Lake Gold, Kodiak Copper, Power Metallic, Noble Plains Uranium, Loyalist Exploration	Gold, Copper, Uranium
North America	United States	U.S. Gold Corp., Arizona Gold & Silver, Scorpio Gold	Gold, Silver
Latin America	Mexico	Guanajuato Silver	Silver
Central Asia	Kazakhstan	Arras Minerals	Copper
Global / Offshore	Multiple Regions	BluEnergies, DigiPower X	Energy & Infrastructure

How Companies Set the Table for the Year

January corporate activity focused less on headline-making transactions and more on structural readiness. Leadership updates, strategic partnerships, and positioning moves reflected a preference for alignment over acceleration. These decisions, while quieter than financings or acquisitions, play a critical role in shaping execution capacity and credibility as projects advance through 2026.

Five Drivers of Modern Mining

Stable Jurisdictions

Canada and the United States continue to attract exploration capital due to regulatory transparency and established mining infrastructure.

Historic Mining Districts

Regions such as Nevada, Red Lake, and Guanajuato remain active because proven mineral belts often yield multiple generations of discoveries.

Energy Security Demand

Uranium exploration and energy infrastructure are gaining attention as nations strengthen long-term power supply strategies.

Electrification Metals

Copper exploration is expanding as grid infrastructure and renewable energy systems increase demand for conductive metals.

Digital Infrastructure Growth

Energy-intensive technologies such as AI and data centers are influencing future resource demand through increased electricity requirements.

Regional Exploration Activity Index

The Resource Map Continues to Expand

The geography of mining evolves continuously as exploration advances and new discoveries reshape global supply chains. While individual projects may be localized, the industry itself remains inherently international — connecting geological discovery, energy systems, and industrial demand across multiple regions.

The companies featured in this edition represent just a portion of that global network. Their exploration programs, development milestones, and operational assets contribute to a broader system that ultimately supports infrastructure, technology, and energy production worldwide.

Global Themes & Signals

Five Global Signals Emerging from the Sector

- **Exploration Discipline Increasing**

Companies are prioritizing model refinement and step-out drilling rather than speculative expansion into new districts.

- **Capital Deployment Becoming More Selective**

Financing rounds increasingly align with defined exploration programs and development milestones.

- **Energy Security Driving Resource Demand**

Uranium and energy-related resources are gaining renewed attention within global policy discussions.

- **Electrification Expanding Copper Demand**

Grid infrastructure, renewable energy systems, and technology manufacturing continue to strengthen long-term copper fundamentals.

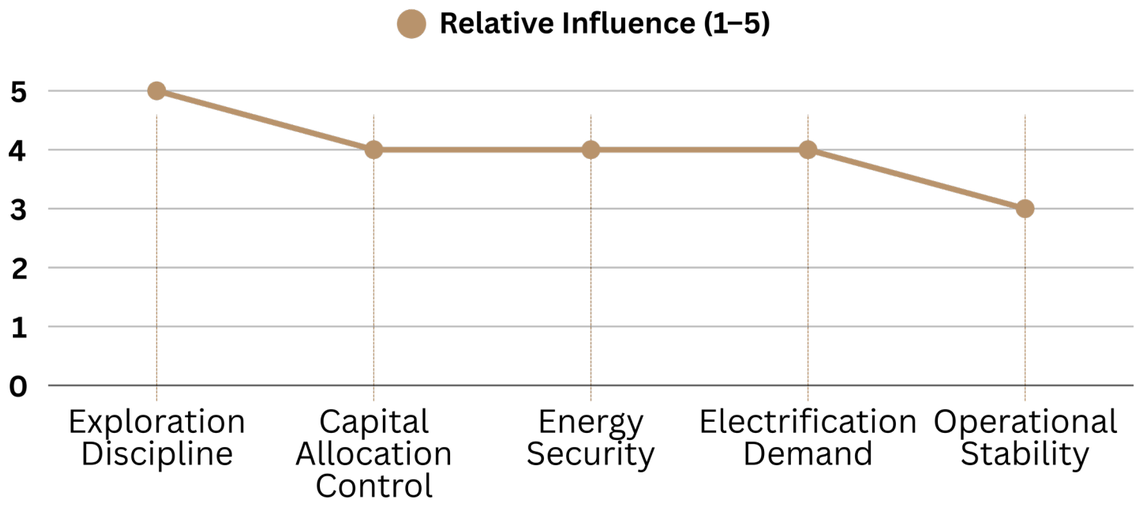
- **Operational Stability in Producing Regions**

Producers are emphasizing efficiency and continuity rather than aggressive expansion during early-cycle conditions.

Global Themes Shaping the Resource Sector

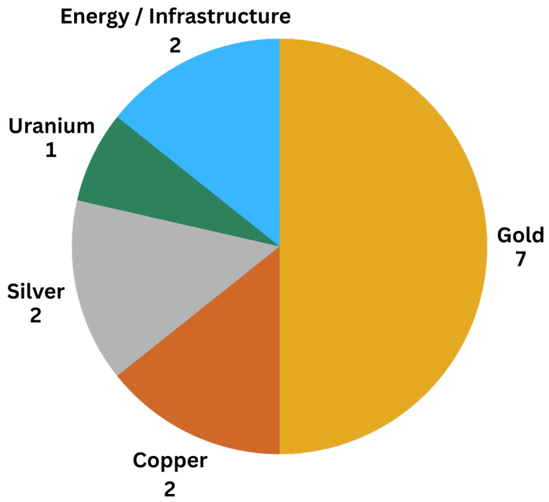
February's developments across exploration, development, and production highlight broader structural shifts shaping the global mining industry. Rather than rapid expansion, the sector appears to be entering a phase defined by disciplined exploration, measured capital deployment, and strategic alignment between geology, infrastructure, and long-term energy demand.

Multiple commodities are advancing simultaneously as governments and industries focus on supply security. Gold continues to anchor financial stability narratives, while copper, uranium, and polymetallic systems are increasingly tied to electrification, power infrastructure, and energy transition policies. Together, these forces are gradually reshaping investment priorities across the resource sector.



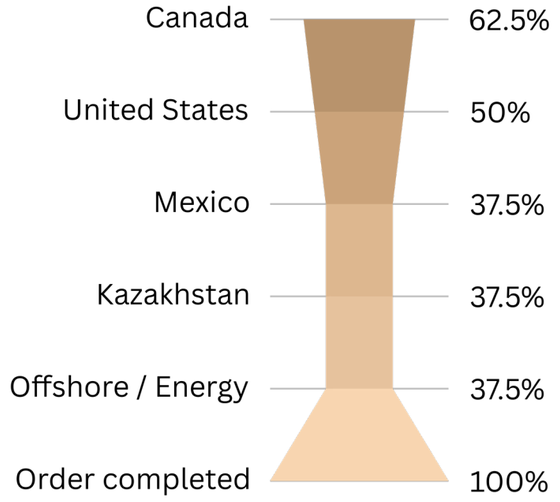
February Snapshot

Companies by Commodity



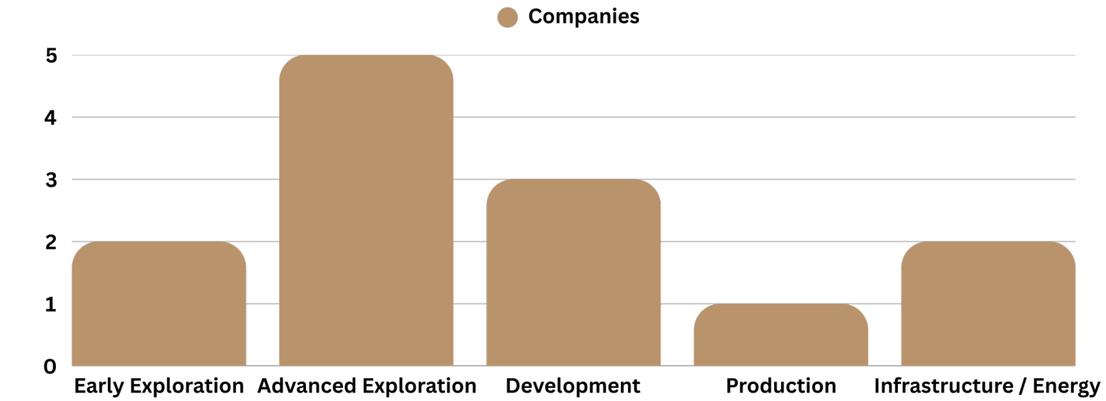
Gold dominates the company mix in this edition, while copper, silver, uranium, and energy infrastructure projects add diversification across commodities supporting financial stability, electrification, and global energy systems.

Regional Activity Distribution



Exploration and development activity is concentrated in Canada and the United States, while Mexico, Kazakhstan, and offshore regions contribute additional resource and energy project activity.

Project Development Stage



Most companies featured remain in exploration phases, with several advancing toward development. A smaller portion represents producing assets and infrastructure projects supporting broader mining and energy ecosystems.

Closing Perspective

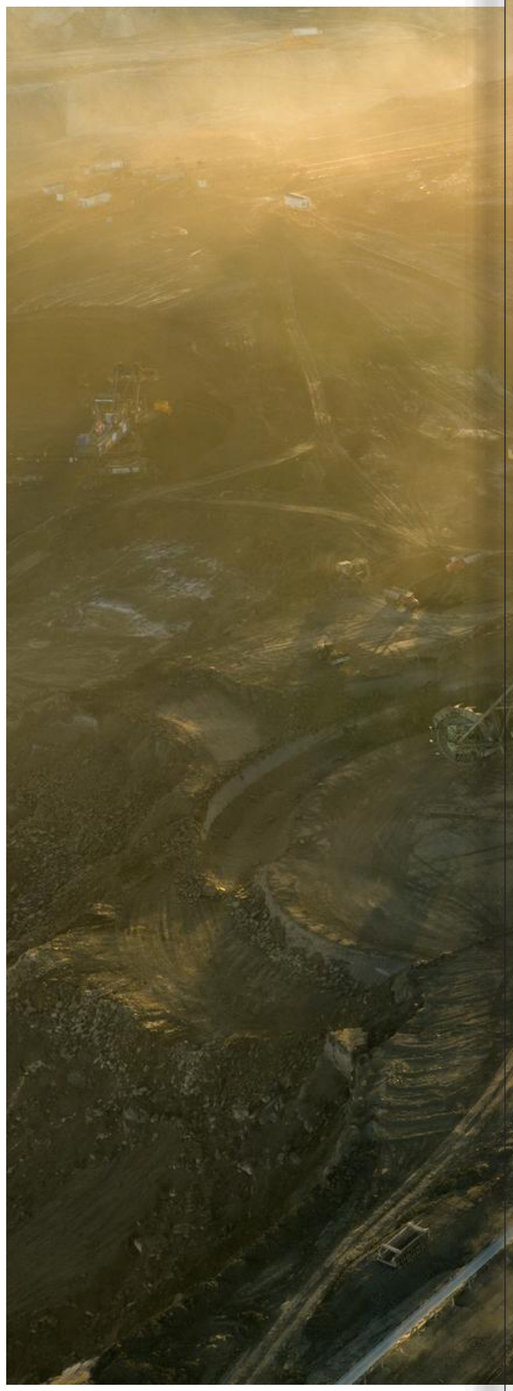
The Industry Moves in Layers

The mining sector rarely changes direction in a single moment. Progress occurs through layers — geological understanding deepens, operational discipline strengthens, and capital gradually aligns with opportunity. February's developments across exploration, development, and production illustrate this layered progression.

The companies featured throughout this issue demonstrate how preparation defines the early stages of a cycle. Drill programs expand known systems, development projects move through engineering and permitting, and producing assets focus on operational consistency. These actions may appear incremental individually, yet together they shape the foundations of future growth.

A Sector Defined by Continuity

- Mining operates on long time horizons, where discoveries and projects evolve gradually through structured exploration and development stages.
- Projects advance through defined milestones, including drilling, engineering, permitting, and infrastructure sequencing.
- Durable mining cycles are shaped by discipline rather than rapid expansion or speculative activity.
- Alignment between geology, leadership, capital, and infrastructure enables steady and sustainable progress.
- February's developments suggest strengthening coordination across multiple segments of the resource sector.



Looking Forward

The next phase of mining growth will likely emerge not from sudden shifts, but from the steady work already underway. As exploration programs continue, development assets mature, and infrastructure expands, the industry moves gradually toward the next stage of the resource cycle.

Across the sector, companies are strengthening geological models, advancing technical studies, and aligning capital with long-term project development. This deliberate progression reflects an industry preparing foundations carefully, where disciplined preparation today often shapes the opportunities that emerge tomorrow.

IMARC INTERNATIONAL MINING AND RESOURCES CONFERENCE+EXPO

JOIN THE GLOBAL MINING COMMUNITY AT IMARC 2026!

Unlock new opportunities in mining, energy, and resources at IMARC 2026. This premier event will bring together industry leaders, innovators, and investors for three days of networking, knowledge-sharing, and groundbreaking discussions.

DATE: NOVEMBER 12-14, 2026
LOCATION: MELBOURNE, AUSTRALIA

- **Connect with global mining professionals**
- **Explore cutting-edge technologies and solutions**
- **Gain insights from industry experts**
- **Drive investment and business growth**
