Publisher: Mining Discovery **www.miningdiscovery.com**

Table of Content

1. Digi Power X Inc.

Digi Power X builds sustainable, high-performance data centers, transitioning from crypto mining to AI, energy infrastructure, and modular computing solutions.

2. USDC

USDC develops cost-efficient, AI-focused Tier III data centers by converting underutilized energy assets into high-performance computing infrastructure.

3. Loyalist Exploration

Loyalist Exploration acquires and develops Canadian mineral assets, focusing on gold, copper, and nickel projects in the Timmins region.

4. US Gold Corp.

U.S. Gold Corp. develops U.S.-based gold-copper projects, prioritizing near-term CK Gold production and long-term exploration growth.

5. Arizona Gold & Silver

Junior mining explorer advancing gold-silver projects across Arizona and Nevada, including Philadelphia, Silverton, and Sycamore Canyon.

Digi Power X Inc.

DigiPower X Positions for Growth with AI/HPC and Sustainable Energy Innovations

DigiPower X is evolving into a leading AI/HPC data center provider, with 100% owned sites totaling ~100 MW, scalable to 220 MW by FY2026. The company is launching ARMS™ modular data centers powered by NVIDIA GPUs to meet growing enterprise AI demand. Committed to ESG, DigiPower X operates a 5.5 MW solar project, explores battery storage, and partners with NANO Nuclear Energy on SMR feasibility for clean, reliable baseload power—supporting 24/7 AI workloads. Strong liquidity and zero long-term debt underpin this aggressive, sustainability-focused growth strategy.

Evolving Mission and Core Business Model

DigiPower X began as a blockchain and Bitcoin mining company, focusing on scaling hashrate and reducing energy costs through vertical integration. Its early strategy centered on crypto-centric operations, including hosting and self-mining, supported by renewable and zero-carbon energy sources to maintain efficiency and mitigate market volatility.

In early 2025, DigiPower X pivoted to AI/HPC infrastructure development, emphasizing Tier-3-ready modular data centers powered by advanced GPUs. The new model targets high-demand computing sectors, leveraging existing power assets and partnerships with industry leaders like Super Micro and NVIDIA, shifting away from volatile cryptocurrency dependence. The company now operates a vertically integrated model combining energy generation, colocation services, and AI infrastructure. Revenue streams include utility power sales, Tier-1 colocation, and selective self-mining, while ESG initiatives—such as solar arrays, battery storage, and SMR feasibility studies—support sustainable growth and appeal to institutional investors.

CEO Profile

Michel Amar is Chairman and CEO of DigiPower X since 2020. A French-American entrepreneur with a bachelor's in Accounting & Business Management, he's recognized for innovation in blockchain, electronics, and consumer tech. He led DigiPower's pivot from crypto mining to AI/HPC infrastructure and sustainable energy leadership.

"We are actually pivoting and leveraging our infrastructure to get a much higher multiple through the AI data centers."
— Michel Amar, CEO, DigiPower X

Michel Amar
Chairman and CEO of DigiPower X

Operational Footprint and Infrastructure

Current Sites

DigiPower X operates ~100 MW across three sites: North Tonawanda (60 MW gas, $3–5M annually), Buffalo (18–19 MW hydro with 5.5 MW solar), and Alabama (22 MW Tier-3 AI/HPC-ready). Alabama begins GPU integration by Q4 2025. Full ownership ensures complete operational control, with plans to expand North Tonawanda to 120 MW and Alabama to 55 MW by 2027.

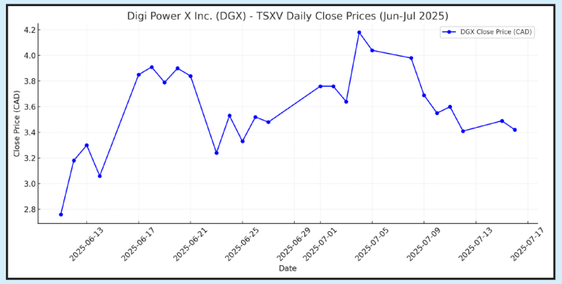
Strategic Development

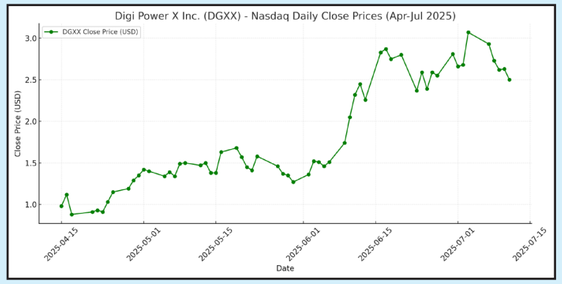
DigiPower X owns a 20-acre site in Hildebran, North Carolina, adjacent to Duke Energy and near a Google data center. This site offers 200 MW development potential for Tier-3 AI/HPC facilities under ARMS™, with development commencing Q4 2025. The project anchors their Southeast expansion strategy, providing low-latency, high-capacity infrastructure near major enterprise clients in the growing AI market.

Expansion Plan

The company targets ~220 MW capacity by FY 2026, leveraging existing assets and North Carolina expansion. North Tonawanda may double to 120 MW, Alabama scales to 55 MW by 2027, and Buffalo remains steady at 18–19 MW. This strategy emphasizes full site ownership, rapid deployment, and minimizing permitting delays to serve AI/HPC clients effectively and quickly.

Stock Performance Data





Digi Power X Inc. (DGX) - TSXV (Daily Close)

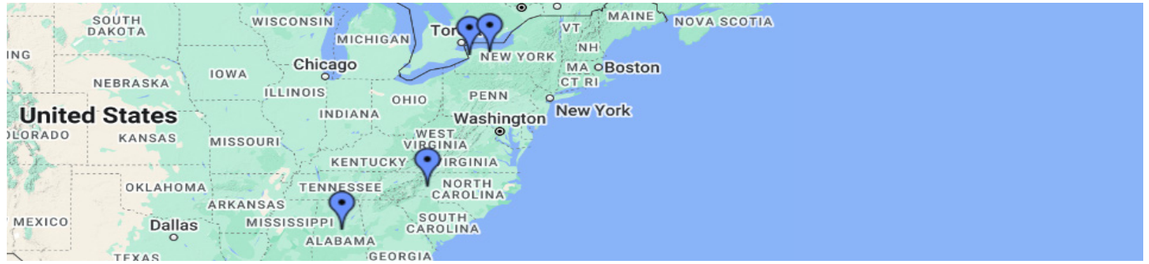
- **Recent Range**: C$2.76 – C$4.18 (Jun–Jul 2025).
- **52-Week Range**: C$1.19 – C$5.42 (near all-time highs).
- **Strong Momentum**: Price surged ~52% from C$2.76 (Jun 11) to C$4.18 (Jul 4).
- **Catalysts**: Driven by AI/HPC infrastructure announcements, Super Micro & NVIDIA partnerships, and expansion plans to 220 MW capacity.
- **Liquidity**: Volume spikes around news events, peaking at 98,900 shares (Jun 11).

DGX: DGX trades near 52-week high with strong momentum, zero debt, revenue growth, high volatility, and appeal for risk-tolerant investors.

Digi Power X Inc. (DGXX) - Nasdaq (Daily Close)

- **Last daily close (July 18, 2025)**: $3.67, up 10.21% on the day
- **After-hours price**: $3.51, down 4.36%
- **52-week trading range**: $0.84–3.77
- **Market cap**: ~$135 M, up ~237% year-over-year
- **Revenue (TTM)**: $33.3 M; Net loss (TTM): –$13.3 M
- **Debt-to-Equity**: 0 %; Current ratio: 0.87

DGXX: DGXX trades near 52-week high with strong momentum, revenue growth, profitability challenges, high volatility, and appeal for risk-tolerant investors.



Key Operational Sites

North Tonawanda, NY

60 MW combined-cycle natural gas plant, fully owned, behind-the-meter with NYISO participation. Plans underway to expand to 120 MW, supporting Tier-3 data centers and energy sales.

Alabama (Columbiana)

22 MW substation acquired in 2022. Targeting 55 MW by 2027. First ARMS™ AI data center pod with NVIDIA GPUs to deploy Q4 2025.

Buffalo, NY

18–19 MW hydro-powered facility. Hosts a 5.5 MW community solar array and planned 0–5 MW battery storage for energy optimization and sustainability.

North Carolina (Hildebran)

20-acre graded parcel near Duke Energy substation and Google data center. Development planned for up to 200 MW Tier-3 AI/HPC capacity starting Q4 2025.

Future endevours of DigiPower x

AI/HPC Expansion with ARMS™ Platform

- Launching Alabama ARMS 200 AI data center with NVIDIA Q4 2025.
- Vertically integrating to scale facility power to 55 MW by 2027.
- Targeting anchor AI and cloud contracts for recurring infrastructure revenue.

Clean Energy and Storage Projects

- Expanding 5.5 MW Buffalo community solar array after $100,000 savings.
- Evaluating 0–5 MW battery storage with NYSERDA for energy resilience.

SMR/Microreactor Development with NANO Nuclear

- MOU with NANO Nuclear Energy Inc. to explore deployment of SMR or microreactor technology at New York sites, potentially enabling scalable, clean baseload power.
- Microreactors are gaining traction in data center markets due to cleaner, more reliable dispatchable power. NANO raised ~$134M in 2024 to support microreactor development.

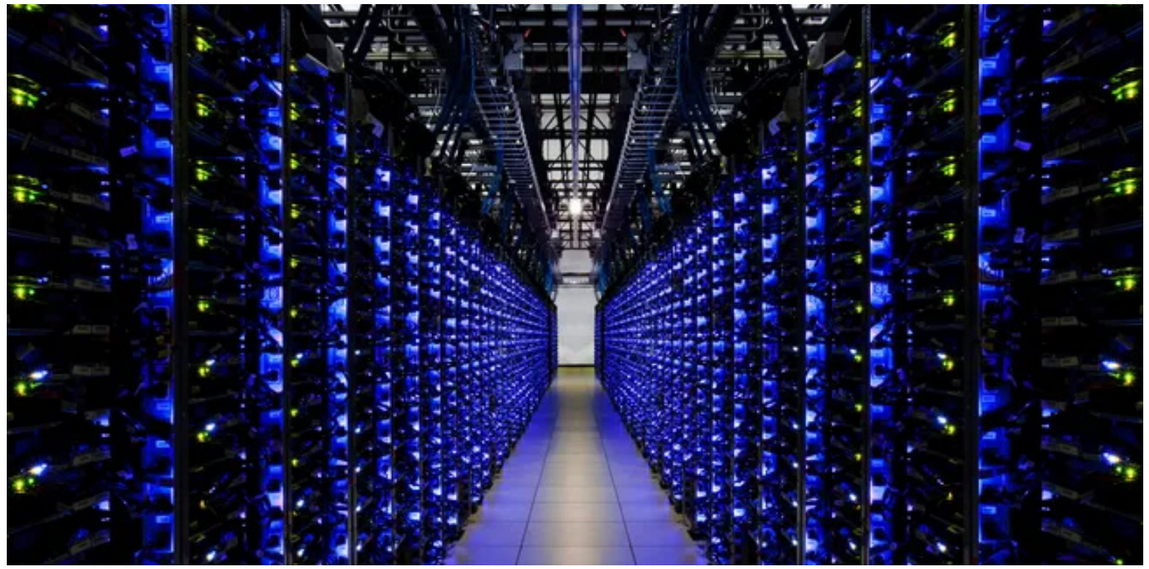
Why These Matter for DGX Stock & Future Value

- **Infrastructure advantage**: Owning and powering its sites gives control over deployment speed and operating margins.
- **Diversified revenue mix**: AI/HPC hosting, energy sales, recycling of mined digital assets.
- **Improved ESG profile**: Clean energy, energy storage, and nuclear projects strengthen appeal to institutional green investors.
- **Financial strength**: Positive EBITDA, 64-65% YoY revenue growth, strong liquidity, zero long-term debt—creates flexibility for project expansion.

Executing on these ambitions could unlock meaningful valuation upside for both DGX (TSXV) and DGXX (Nasdaq).

What the Company Offers

- Digi Power X executed a definitive purchase order with **Supermicro for NVIDIA Blackwell B200-powered systems**, deploying them within its **ARMS 200** modular pods to launch its **NeoCloud Tier-3 AI infrastructure** at the Alabama site in Q4 2025. Each megawatt of infrastructure is expected to generate recurring GPU rental revenue via NeoCloud
- The company is also designing **ARMS 300** pods optimized for next-gen NVIDIA B300 chips, with a roadmap targeting a **55 MW Tier-3 AI deployment by 2026–2027**.



DIGIPOWER X

POWERING THE AI REVOLUTION WITH SUSTAINABLE INTELLIGENCE.

- Tier 3-Ready AI Data Centers purpose-built for NVIDIA B200 & GB200 workloads
- 100% Site Ownership across NY, AL & NC for full control & scalability
- Zero Long-Term Debt with strong positive cash flow and growing revenue
- Energy + AI Dual Strategy: From colocation to solar to nuclear-powered edge computing
- Strategic Partners: Super Micro + NANO Nuclear = tech & energy leadership

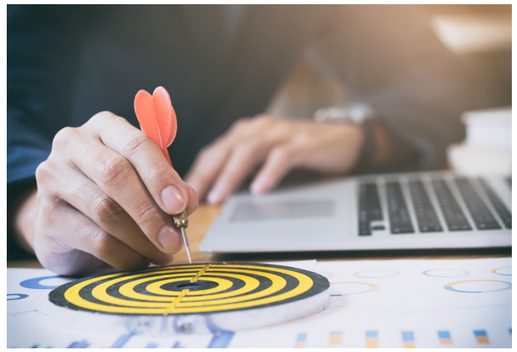
USDC

USDC: Strategic Growth Positioning

US Data Centers Inc. (USDC), a subsidiary of Digihost Technology Inc., leverages a cost-efficient model by converting underutilized energy assets into Tier III HPC facilities. With its 20 MW pilot site in Columbiana, Alabama, launching in Q1 2026, USDC demonstrates scalable infrastructure tailored for AI-driven workloads and hyperscale expansion. Aligned with soaring global AI demand, USDC emphasizes renewable energy integration, including hydro, solar, and Small Modular Reactors. This sustainability-focused approach, combined with financial strategies targeting high EV/EBITDA multiples, positions USDC as a competitive player in AI infrastructure. Its agility and cost advantage enable faster deployment and premium client attraction.



Evolving Mission and Core Business Model

US Data Centers Inc. (USDC) is built on a mission to revolutionize the AI and High-Performance Computing (HPC) infrastructure landscape. Its strategy focuses on converting underutilized energy assets into state-of-the-art Tier III data centers. This unique approach reduces development costs and accelerates deployment compared to traditional data center construction.

USDC prioritizes performance, efficiency, and sustainability, aiming to provide reliable computing power for AI-driven workloads. By leveraging renewable energy sources like hydro, solar, and Small Modular Reactors (SMRs), the company ensures long-term operational stability. This combination of advanced technology and clean energy reflects its commitment to ESG-focused growth.

The core business model is designed to capture rising AI market demand while maintaining a competitive cost structure. With its pilot project in Columbiana, Alabama, and plans for hyperscale expansions, USDC demonstrates its ability to scale quickly. This positions the company as a future leader in AI infrastructure.

CEO Profile

As a newly formed, wholly-owned subsidiary of DigiPower X Inc., US Data Centers Inc. (usdatacenters.ai) does not have a separate, publicly announced Chief Executive Officer (CEO) distinct from its parent company's leadership. Search results for "US Data Centers Inc. CEO" often refer to executives of other data center companies, such as Nicholas Laag of Prime Data Centers or Bob DeSantis of 365 Data Centers 4, who are not affiliated with the USDC entity formed by Digihost. Therefore, the operational leadership for USDC is integrated within the executive management of Digihost Technology Inc., with specific roles for the subsidiary's direct oversight not detailed in the currently available materials. This organizational structure is typical for a nascent, strategically focused subsidiary, indicating its close alignment with and reliance on its parent company's existing management and strategic direction.

Operational Footprint and Infrastructure

USDC's operational footprint is anchored by its pilot High-Performance Computing (HPC) data center project in Columbiana, Alabama, which is designed as a scalable blueprint for future hyperscale developments. This pilot site will deploy 20 MW of Tier III AI-ready computing capacity, rolled out in 5 MW increments, with full operational readiness targeted for Q1 2026. The site benefits from a strategic partnership with its parent company, Digihost Technology Inc., leveraging pre-secured power allocations and regulatory approvals, including an additional 33 MW power allocation from Alabama regulators.

USDC's infrastructure strategy revolves around converting underutilized or misused energy assets into state-of-the-art HPC facilities, allowing for rapid deployment and significantly reduced capital costs compared to traditional builds. Future expansion plans include hyperscale facilities ranging from 200–250 MW or larger, with energy sourced primarily from renewable power solutions (hydro, solar, and Small Modular Reactors) to ensure sustainability and resilience. This cost-efficient, scalable model positions USDC as a key enabler of next-generation AI workloads that require high-density, low-latency infrastructure.

Category	Cost per MW
Purchase Power Assets at a Significant Discount	~$85K-$150K
Develop Asset to Service HPC Data Centers	~$7M-$8M
Total Power Development Cost (USDC)	$7.5M-$8.5M
Industry Avg HPC Tier III Power Development Cost	~$15M

This table shows USDC Development Model Cost Comparison

Time Frame	Phase/Activity
4Q24	Complete Project Feasibility at Columbiana, AL Site
4Q24	Secure Funding for Phase I of Columbiana, AL buildout
1Q25	Initiate Phase I Buildout
2Q25	Complete Phase I Buildout
2Q25	Secure Institutionalized Funding for Phase II buildout
1H26	Complete 20 MW Pilot Plant

This table shows USDC Short-Term Project Timeline (2024-2026)

Category	2025E EV/EBITDA Multiple
Digital Asset Miners	5.6x
Hybrid (HPC | Mining)	9.1x
High Performance Computing	21.9x

This table shows USDC Short-Term Project Timeline (2024-2026)

Project Pipeline

Columbiana, Alabama (Pilot / Proof-of-Concept)

60 MW combined-cycle natural gas plant, fully owned, behind-the-meter with NYISO participation. Plans underway to expand to 120 MW, supporting Tier-3 data centers and energy sales.

Phase	Capacity	Target COD	Budget
Phase I	22 MW	Q2 2026	$176 million cap-ex
Phase II	_	Q1 2027	$264 million cap-ex
Total	55 MW	_	$440 million cap-ex (70-100% debt targeted)

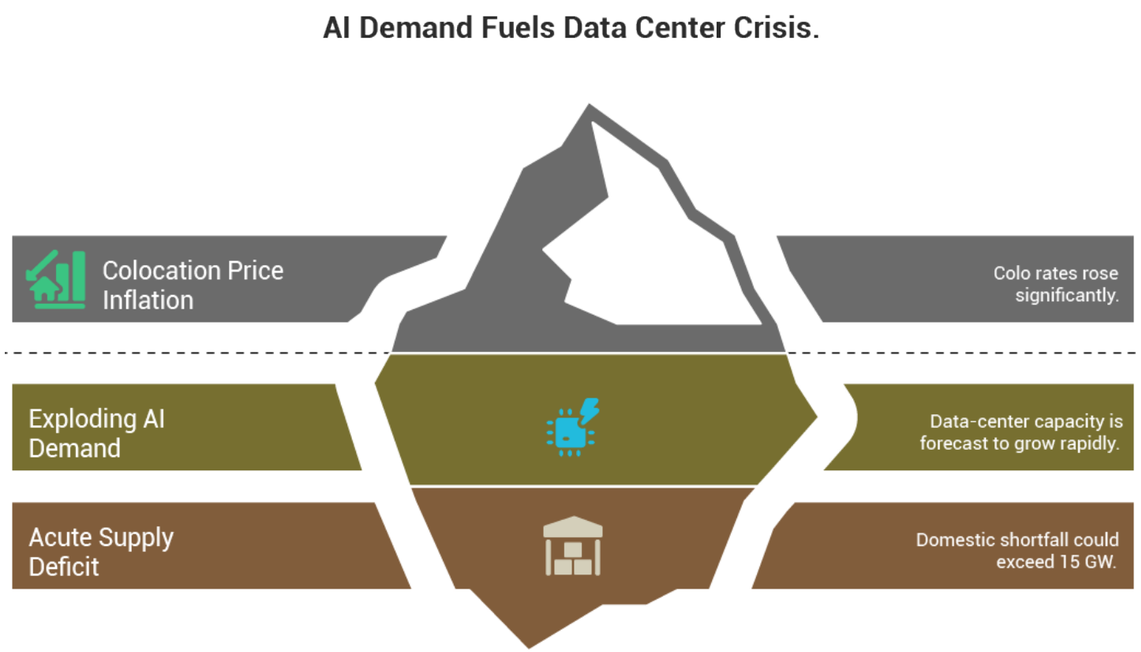
- Alabama regulators approved a 33 MW incremental load study, securing the capacity headroom.
- A >$100 billion-market-cap technology company is in offtake talks, de-risking demand.

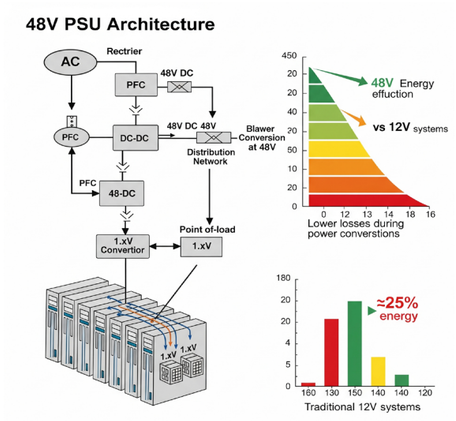
Future Hyperscale Vision (2026+)

- Acquire 200–250 MW green-or-brownfield sites, financed at 70–100% loan-to-value, and powered predominantly by hydro, solar, or small-modular reactors (SMRs).
- Pursue modular power partnerships to reach regions previously off-grid for hyperscale AI compute.

Market Tailwinds

- **Exploding AI-ready demand**: Global data-center capacity is forecast to grow from ~55 GW in 2023 to 171-219 GW by 2030 (+19-22% CAGR), with AI workloads comprising ~70% of the total.
- **Acute supply deficit**: Even if every announced U.S. build materializes on schedule, the domestic shortfall could exceed 15 GW by 2030.
- **Colocation price inflation**: U.S. colo rates rose 35% between 2020 and 2023 as vacancy in hubs like Northern Virginia fell below 1%.





Technology Architecture Alignment

- **Cooling:** USDC designs for rear-door heat-exchangers, direct-to-chip, and immersion systems—key for racks trending from 17 kW today to 30-120 kW by 2027.
- **Electrical systems:** 48-V PSU deployments cut energy loss 25% versus legacy 12-V, while floor-mount PDUs simplify distribution at higher amperages.
- **Location strategy:** Preference for power-plentiful but demand-light regions (e.g., Alabama, Indiana, Wyoming) mirrors hyperscaler migrations away from oversubscribed hubs.

Risk Considerations

- **Execution risk:** Converting power plants into Tier III facilities demands specialized engineering and integrator partners.
- **Financing risk:** A 70-100% debt stack presumes strong offtake agreements; failure to secure hyperscaler tenants could tighten credit markets.
- **Parent crypto volatility:** While structurally separated, any distress in Digihost's mining arm could impair capital allocation to USDC.

What This Means for Future

- **Specify the angle**—e.g., "SMR integration," "debt-financing terms," or "competitive positioning versus QTS and Digital Realty."
- **Indicate timeframe**—for example, "2026 revenue forecast" vs. "long-term 2030 market share."
- **Request depth**—snapshot bullet points or detailed multi-section analysis.

REDEFINING AI INFRASTRUCTURE. ONE MEGAWATT AT A TIME.

What Sets USDC Apart:

- 50% Lower Build Cost vs. traditional HPC data centers
- Tier III AI-Ready Sites converted from underused energy assets
- Sustainable Power Focus with future SMR & renewable integration
- Backed by Hyperscaler Demand with pilot site launching in 2026
- Pureplay HPC Model designed for premium valuation & investor clarity

USDC: Building the Backbone of the AI Revolution.

Loyalist Exploration Limited

Company Origins and Evolution

Loyalist Exploration Limited originated as Golden Birch Resources Inc., incorporated in 2017 in Toronto by Alan Martin. The company initially focused on copper-gold exploration in Papua New Guinea's Keveri Project. Early work during 2018–2019 included geological mapping, sampling, and community partnerships, laying the groundwork for targeted drilling and future exploration programs.

Golden Birch shifted focus to Canada after listing on the CSE (GBRX) in February 2020. Concentrating on Ontario's mineral belts, it strengthened leadership in May 2021 by appointing David Drinkwater as Chair and Steve Balch as technical director, enhancing exploration expertise and positioning itself within Canada's well-established and resource-rich mining jurisdictions.

In August 2021, the company rebranded as PNG Copper Inc. (PNGC), reflecting a shift to base metals. Focus centered on critical minerals, particularly nickel, culminating in the acquisition of the Loveland Nickel Project in 2025. This phase emphasized technical growth, strategic acquisitions, and positioning within North America's growing critical-minerals exploration market.

By October 2023, the company became Loyalist Exploration Limited (PNGC), embracing multi-commodity exploration across gold, nickel, copper, and silver. With the "Buy Timmins" strategy, Loyalist consolidated Ontario's Timmins Mining Camp. Under President & CEO Errol Farr (since April 2024), it pursues growth through disciplined acquisitions and enhanced corporate leadership.

CEO Profile

Errol Farr is a veteran mining executive with 35+ years' experience in finance, governance, M&A, and operational leadership.

"We are very excited that both Birks and Ashley have joined the Company. We are confident they will provide valuable perspectives as we continue to execute our strategy, drive profitability, and enhance value for all Loyalist shareholders."
— Errol Farr President & CEO of Loyalist

Errol Farr
President & CEO of Loyalist

Core Business and Strategic Focus

Loyalist Exploration's primary business is the acquisition, exploration, and development of Canadian mineral properties, with a diversified focus on gold, silver, nickel, and copper. The company's core strategy is a "'Buy Timmins' approach," which concentrates on acquiring assets within the historically rich Timmins Mining Camp in Ontario. This geographic focus is central to its growth and operational model.

Advantages of this focus include:

- Reduced Risk: Lowers the inherent geological and discovery risks by operating in a proven, world-class mining district.
- Cost-Effectiveness: Leverages existing infrastructure, a skilled labor pool, and a wealth of historical data to enable more efficient programs.
- Strategic Value: Signals a pragmatic approach by focusing on areas with demonstrated mineral potential, which is viewed favorably by investors.

Milestones in Corporate Development

Founding and Corporate Identity

- October 4, 2017: The company was founded and formally incorporated.
- February 27, 2020: Achieved its initial public listing on the CSE as Golden Birch Resources Inc..
- 2021-2023: Underwent strategic rebranding, first to PNG Copper Inc. on August 10, 2021 , and then to its current name, Loyalist Exploration Limited, on October 17, 2023.v

Strategic Acquisitions

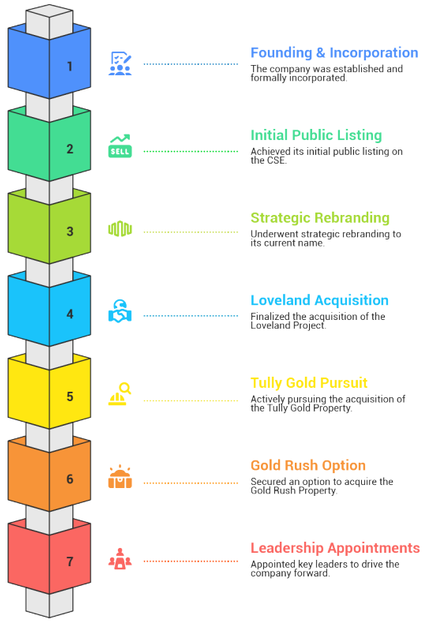
A pivotal part of Loyalist's growth is its "Buy Timmins" approach, leading to several key property acquisitions:

- Loveland Project: Finalized the acquisition of this "cornerstone" gold, copper, and nickel property on June 30, 2025.
- Tully Gold Property: Actively pursuing the acquisition from Fulcrum Metals Plc, with the closing date extended to September 30, 2025.
- Gold Rush Property: Secured an option to acquire this property in Turnbull Township, Ontario.

Key Leadership Appointments

- April 3, 2024: Errol Farr was appointed as President and CEO.
- May 29, 2025: Bob Bresee joined the board of directors.

Loyalist Exploration's Growth Journey



Projects

Core Projects in the Timmins Mining Camp

Loveland Project

Considered a "cornerstone project," the acquisition of Loveland was completed on June 30, 2025. This VMS project, located northwest of Timmins, has potential for gold, copper, and nickel. It includes historical estimates of significant nickel-copper mineralization and notable gold assays. A data assessment is underway to formulate an exploration program anticipated to commence in Fall 2025.

Tully Gold Property

Loyalist is acquiring the Tully Gold property northeast of Timmins , which has a historical estimate of 101,000 indicated and 43,000 inferred gold ounces. The deal is set to close by September 30, 2025.

Gold Rush Property

The company holds an option to acquire the Gold Rush Property, which consists of 41 contiguous mining claims in Turnbull Township, Ontario. Loyalist has made additional historical information regarding this property available to the public.

Other Exploration Properties

Lost Molly Property

The Lost Molly Property consists of 138 contiguous mining claims covering 2,534 hectares in Walls Township, Ontario. It is situated approximately 80 kilometers south of Hearst.

Newfoundland Properties

Beyond its core Ontario assets, Loyalist is engaged in exploration activities at other Canadian properties. These initiatives in Newfoundland include the Rolling Pond Gold Property, the Springdale Copper Property, and the Hungry Hill Critical Minerals Polymetallic Project.

Future Growth

To maintain a robust project pipeline, Loyalist remains proactive in evaluating new targets. The company is currently conducting ongoing due diligence on two additional potential projects within its strategic focus area of Timmins.

The Financial Engine: Capital, Dilution, and the Cost of Growth

Loyalist Exploration's growth is fueled entirely by equity financing, as it currently generates no revenue. The company raises capital primarily through non-brokered private placements, selling "units" to investors to fund property acquisitions and exploration programs. This reliance on equity comes at the cost of significant shareholder dilution, a fundamental trade-off for growth in the junior mining sector.

- **Financing Structure**: A recent offering aims to raise up to $1.5 million by selling units at $0.01 each.
- **Unit Composition**: Each unit typically includes one common share and one purchase warrant. The warrant allows the holder to buy another share at a higher, pre-determined price (e.g., $0.05) for a set period, offering leveraged upside.
- **Share Dilution**: With over 263 million shares outstanding and another 128 million reserved for issuance, existing shareholders' ownership percentage decreases with each financing round needed to fund operations. Investors accept this dilution in the hope that a major discovery will create value that far outweighs it.

Date Announced	Type	Amount Targeted (CAD)	Price per Unit (CAD)	Unit Terms (Shares + Warrants)	Warrant Exercise Price / Term	Status
Feb 12, 2025	Non-Brokered Private Placement	$600,000	$0.01	1 Share + 1 Warrant	$0.05 / 36 months	Announced
Apr 9, 2025	Non-Brokered Private Placement (Upsized)	$1,500,000	$0.01	1 Share + 1 Warrant	$0.05 / 36 months	Ongoing; $300,000+ closed
Jun 30, 2025	Concurrent Financing (Tranche)	$275,000	$0.01	1 Share + 1 Warrant	$0.05 / 36 months	Closed
Jul 11, 2025	Concurrent Financing (Tranche)	$30,000	$0.01	1 Share + 1 Warrant	$0.05 / 36 months	Closed

The Price of Growth: Capital and Dilution

Loyalist funds its growth entirely through equity financing, as it has no revenue. This necessary funding for acquisitions comes at the cost of shareholder dilution.

- Capital is raised by selling "units," each containing a share and a warrant.
- This dilutes ownership but is crucial for funding the company's growth strategy.

Strategic Analysis and Outlook: Catalysts, Risks, and Forward Trajectory

Path to Re-Valuation: Key Catalysts

Loyalist's path to a higher valuation depends on key de-risking events. The most critical near-term catalyst is finalizing the Tully Gold Property acquisition, which would add a significant historical gold resource to its portfolio. Another pivotal event is the planned Fall 2025 exploration program at the cornerstone Loveland project; positive drill results would validate the company's acquisition strategy. Further catalysts include successfully closing its ongoing financing, making additional accretive acquisitions in the Timmins area, and eventually upgrading historical resources to be compliant with NI 43-101 standards.

Primary Risks: Significant Headwinds

Investors face substantial headwinds. The most acute is financing risk, as Loyalist's survival depends entirely on its ability to raise capital in a competitive market. Exploration risk is also inherent; there is no guarantee that drilling will yield economic results. The company's growth strategy is funded by issuing new shares, leading to significant shareholder dilution, which is a fundamental trade-off investors must accept. Finally, execution risk in managing multiple projects and the volatility of commodity prices for gold, copper, and nickel present ongoing challenges to the company's valuation.

Concluding Outlook: A Bet on Execution

Loyalist Exploration presents a classic high-risk, catalyst-driven investment opportunity. The company has successfully pivoted to a clear "Buy Timmins" strategy, focusing on acquiring and advancing projects with significant historical data. The investment thesis now hinges on execution. Near-term success will be measured by the closing of the Tully acquisition and positive exploration results from the Loveland project. Favorable outcomes could significantly re-rate the company's valuation, while failure would reinforce market skepticism. Ultimately, it is a bet on management's ability to translate a sound strategy into tangible geological success.

U.S. Gold Corp.

Company Overview

U.S. Gold Corp. **(NASDAQ: USAU)** is at a pivotal inflection point, transitioning from a development-focused entity to a near-term producer, underpinned by a clear strategic vision and significant recent achievements. The company's primary focus is the advancement of its flagship CK Gold Project in Wyoming, which is now fully permitted and "shovel-ready" following key regulatory approvals in 2024. An updated February 2025 Pre-Feasibility Study (PFS) confirms the project's robust economics, projecting an average annual production of over 110,000 gold-equivalent ounces with an attractive after-tax Net Present Value (NPV) of $356 million.

The company's forward-looking strategy is centered on a series of well-defined catalysts. The immediate priority is the completion of a final Feasibility Study (FS) for the CK Gold Project, targeted for late 2025, which will pave the way for a construction decision. Management is actively pursuing a minimally dilutive financing strategy to fund the estimated $277 million in capital expenditures, with construction potentially commencing in late 2025 or early 2026. This near-term production profile is complemented by a long-term growth strategy centered on its district-scale exploration assets, the Keystone Project in Nevada and the Challis Gold Project in Idaho, which offer significant "blue-sky" discovery potential.

The company's business model employs a dual-pronged strategy that balances near-term, de-risked development with high-impact, long-term exploration :

- Near-Term Production: The primary objective is to bring the fully permitted CK Gold Project in Wyoming into production to generate cash flow and establish U.S. Gold Corp. as a U.S. metals producer.
- Long-Term Growth: The company holds significant exploration assets, including the Keystone Project on Nevada's prolific Cortez Trend and the Challis Gold Project in Idaho, which represent the company's future growth engine.

This strategy is executed by a management team with deep operational experience at major global mining companies, including Barrick Gold, Rio Tinto, and Kinross Gold, providing a level of execution expertise critical for the transition to a producing entity.

CEO Profile

George M. Bee, President and CEO, is a senior mining executive with extensive global experience. His career includes a 16-year tenure at Barrick Gold, where he was instrumental in advancing major assets like the Goldstrike, Pierina, and Veladero mines from development into production on three continents.

"We now have an advanced updated glimpse of a very robust, high-value project poised for the next stages of engineering and development, following a board decision to proceed." — George Bee, President and CEO.

George Bee
President and CEO of US Gold

The Future of U.S. Gold Corp: A Focus on Projects and Milestones

The company's future is sharply focused on a sequence of value-driving milestones designed to transition the CK Gold Project from a permitted asset into a producing mine while strategically advancing its exploration pipeline.

CK Gold Project: The Path to Production

Having secured all major permits in 2024, the CK Gold Project is one of the few "shovel-ready" hard rock mining projects in the United States. The project is now entering its final engineering and financing stages, with a clear timeline toward construction and production.

Latest News and Updated Economics

A significant de-risking event occurred in November 2024 with the receipt of the final Air Quality Permit, which rendered the previously approved Mine Operating Permit unconditional. This milestone clears the path for development.

The project's economic viability was reinforced by an updated PFS released in February 2025, which outlined the following highlights based on metal prices of $2,100/oz gold and $4.10/lb copper :

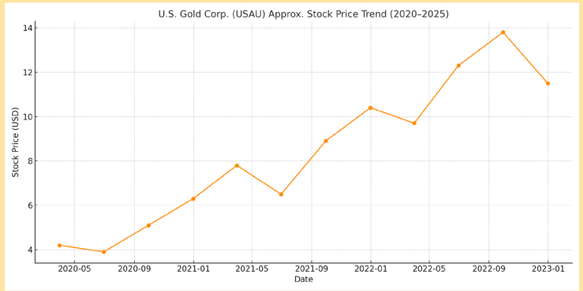
- After-Tax NPV (5%): $356 million
- After-Tax IRR: 29.5%
- Initial Capital Expenditure (CAPEX): $277 million
- All-In Sustaining Cost (AISC): $937 per gold-equivalent ounce
- Average Annual Production: 111,250 gold-equivalent ounces over a 10.2-year operating life
- Proven & Probable Reserves: 1.672 million gold-equivalent ounces, including 1.02 million ounces of gold and 260 million pounds of copper.

Upcoming Catalysts and Future Plans

The company's forward plan for the CK Gold Project is clear and catalyst-rich:

- **Final Feasibility Study (FS)**: U.S. Gold Corp. has engaged industry leaders Micon International and Halyard to complete the final phase of engineering. The FS, which will incorporate final technology selections and provide a detailed cost estimate, is targeted for completion by late 2025.
- **Project Financing**: The company is actively pursuing a financing package of approximately $277 million to fund construction. Management has emphasized a strategy to minimize shareholder dilution by exploring non-traditional financing avenues, including debt linked to concentrate offtake agreements, federal and state loans, and municipal bonding through the state of Wyoming. The company has already received interest from potential debt providers and concentrate buyers.
- **Construction and Production**: Subject to a successful financing package and a final board decision, construction could commence as early as late 2025 or early 2026, with a target for initial production in 2028.
- **Untapped Potential**: The project holds significant upside not yet captured in its formal economics. This includes the potential sale of waste rock as high-quality construction aggregate and the expansion of the mineral resource, as the deposit remains open at depth and to the southeast.

Stock Performance Data



Performance Overview

- **Current Price:** US $11.46 (slightly down approx. –1.16% intraday)
- **52-Week Range:** Low US $4.71 – High US $14.39
- **Year-to-Date Gain:** Roughly +87% (from opening near $6.17 in 2025)
- **1-Year Gain:** Nearly +95% increase over the past year

Historical Context

- The stock originally went public in the mid-1980s.
- Its all-time closing high was US $22,703.60 per share on July 18, 2000, adjusted for splits and dividends
- The lowest close was US $2.61 on March 16, 2020, during the market downturn

Bottom line: After reaching its low in March 2020, USAU rebounded strongly, nearly doubling over the past year and showing sharp upward momentum in 2025. It's still below its 52-week high and well off its all-time 2000 peak—but holds interest for risk-tolerant investors bullish on gold and copper exploration.

U.S. Gold Corp. Growth and Development Trajectory

The following table outlines the company's key milestones and future catalysts that map its growth:

Phase	Key Milestones & Catalysts	Status / Timeline
Phase 1: De-Risking & Permitting (Completed)	Industrial Siting Permit (ISP) Granted for CK Gold	Completed (June 2023)
	Mine Operating Permit (MOP) Approved for CK Gold	Completed (May 2024)
	CK Gold Project Becomes Fully Permitted (Final Air Quality Permit Received)	Completed (November 2024)
	Updated Pre-Feasibility Study (PFS) for CK Gold with Enhanced Economics	Completed (February 2025)
	Inclusion in Russell 2000 & 3000 Indexes, Increasing Market Visibility	Completed (June 2025)
Phase 2: Final Engineering & Financing (Current/Upcoming)	Final Feasibility Study (FS) for CK Gold Project	In Progress; Expected Late 2025
	Secure Project Financing Package (Targeting non-dilutive options)	Pending; To follow Feasibility Study
Phase 3: Construction & Production (Future)	Formal Construction Decision	Pending; To follow successful financing
	Commence Construction at CK Gold Project	Targeted for Late 2025 / Early 2026
	Target for Initial Production	Targeted for 2028
Phase 4: Long-Term Growth (Ongoing/Future)	CK Gold Resource Expansion (Deposit remains open at depth and to the southeast)	Future Potential
	Advance Keystone (NV) and Challis (ID) Exploration Projects	Pending; Awaiting dedicated funding or strategic partnerships

U.S. Gold Corp. is strategically positioned for significant growth, driven by a clear, near-term path to production at its fully permitted CK Gold Project. Having successfully navigated major regulatory hurdles, the company is on the cusp of becoming a new American gold and copper producer.

The coming 12 to 18 months are expected to be transformative, with the anticipated completion of the final Feasibility Study and the announcement of a project financing package serving as major catalysts. Success would trigger the project's development and transition U.S. Gold Corp. into a producer.

With a tight capital structure and a management team focused on minimizing shareholder dilution, the company is well-aligned to create shareholder value. The combination of a de-risked, high-margin development asset and high-upside exploration projects presents a compelling opportunity for investors focused on domestic strategic minerals.

Future Outlook

U.S. Gold Corp. is strategically positioned for transformative growth, driven by a clear, near-term path to production at its fully permitted CK Gold Project in Wyoming. The company is on track to become a new American gold and copper producer, with the next 12 to 18 months expected to be critical for unlocking significant shareholder value.

The company's immediate future is defined by pivotal catalysts. The highest priorities are the completion of a final Feasibility Study (FS) by late 2025 and securing a comprehensive financing package for the estimated $277 million in construction capital. Management is focused on a minimally dilutive strategy, exploring debt, offtake agreements, and state-level bonding to protect its tight capital structure. A successful financing will trigger a construction decision, with development potentially starting in late 2025 or early 2026, targeting initial production in 2028.

This progress is set against a favorable backdrop where both gold and copper are designated as critical minerals with rising demand. Beyond near-term production, U.S. Gold Corp. holds significant long-term value. The CK Gold deposit remains open for expansion, and the potential sale of waste rock as construction aggregate offers a substantial, un-modeled revenue stream. Furthermore, the company's exploration portfolio, featuring the district-scale Keystone Project in Nevada and the Challis Gold Project in Idaho, represents considerable "blue-sky" potential.

This combination of a de-risked, high-margin development asset, a disciplined management team, and a portfolio of high-upside exploration projects presents a compelling opportunity for investors focused on the domestic production of strategic minerals.

U.S. GOLD CORP

America's Next Gold Producer is Shovel-Ready.

- Fully Permitted CK Gold Project — construction-ready with all major approvals
- Robust Economics — $356M after-tax NPV, 29.5% IRR, $937/oz AISC
- Production Targeted by 2026 — over 110,000 gold-equivalent ounces annually
- Low-Dilution Strategy — actively pursuing innovative project financing
- Big Discovery Upside — Keystone (Nevada) & Challis (Idaho) exploration in pipeline

George Bee President & CEO

Arizona Gold & Silver

Executive Summary

Arizona Gold & Silver Inc. **(TSXV: AZS, OTCQB: AZASF)** presents a compelling case study in systematic, modern exploration within a historically significant American gold district. The company is methodically de-risking its flagship Philadelphia Project, demonstrating potential for both high-grade veins and bulk-tonnage, heap-leachable resources. Recent exploration has consistently returned strong drill results, while metallurgical tests confirm excellent gold recoveries, and strategic land acquisitions are paving a clear path toward potential development. These operational successes are backed by a robust treasury, strong insider support, and institutional investment from respected names like the Sprott Group, signaling significant market confidence.

The company's primary focus is advancing the Philadelphia Project towards a maiden NI 43-101 resource estimate, a pivotal catalyst expected within the next year that could significantly re-rate the company's valuation. A savvy portfolio strategy, which includes seeking a venture partner for its newly acquired Sycamore Canyon project, allows Arizona Gold & Silver to maintain this sharp focus on its core asset while preserving upside potential from secondary projects without incurring significant capital expenditure or shareholder dilution.

While subject to the inherent risks of the junior exploration sector, Arizona Gold & Silver has demonstrated a clear, logical, and well-executed strategy that distinguishes it from many of its peers. The company's progress in building fundamental value at the project level appears to be under-recognized by its current market valuation, presenting a potential opportunity for discerning investors who understand the catalysts on the horizon.

CEO Profile

As President, CEO, and a major shareholder, Mike Stark guides the company with a fiscally prudent, methodical approach. His vision is to discover a modern "Oatman-style" high-grade gold system while strategically de-risking the path to production.

"Oatman produced over 2 million ounces of gold, and from day one, that's been our vision for gold mineralization along the Arabian Fault at Philadelphia. While we've focused recently on the shallow stockwork zone—due to its accessibility, lower drilling costs, and increasing gold prices—the real upside lies in discovering a high-grade vein system." — Mike Stark , President and CEO.

Mike Stark
President and CEO of Arizona Gold & Silver

The Crown Jewel: Unlocking the Philadelphia Project

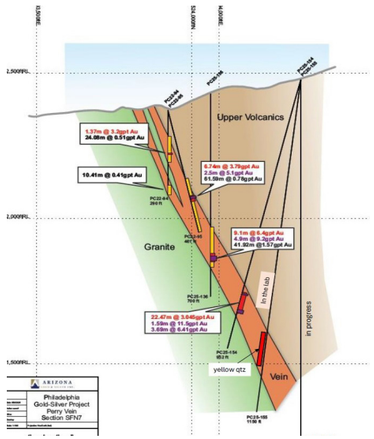
Located in Arizona's prolific Oatman Mining District, the Philadelphia Project is being advanced by Arizona Gold & Silver as a modern "Oatman-style" high-grade gold system. The project builds on the district's history of producing over 2 million ounces of gold, using modern exploration to unlock the potential of a known world-class mineralized system.

Systematic drilling has successfully defined a "dual-threat" discovery, significantly enhancing the project's economic prospects. It features both high-grade veins for a potential underground mine and broad, lower-grade bulk tonnage mineralization at the surface, suitable for a low-cost open-pit operation. This creates a flexible development path where an initial open-pit could fund later underground expansion.

The project is substantially de-risked by excellent metallurgical results, proactive permitting, and strategic land acquisition for future infrastructure.

Key Highlights:

- **Dual-Threat Discovery**: The project hosts both high-grade veins, with intercepts like 72.5 gpt gold over 1.5 meters, and bulk tonnage zones, such as 62.18 meters grading 1.27 gpt gold from surface.
- **Excellent Metallurgy**: Tests show outstanding gold recoveries (90% to over 99%) using standard cyanide leaching, confirming the ore is not refractory and is amenable to low-cost processing.
- **Strategic De-risking**: The company has secured key drilling permits from the U.S. Bureau of Land Management (BLM) and acquired 300 acres of land ideal for future plant and leach pad facilities at minimal cost.



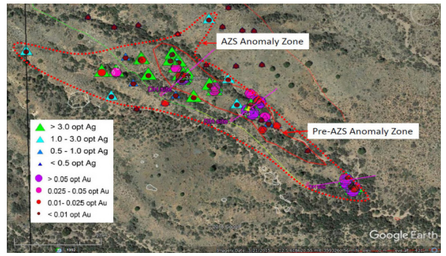
Hole ID	Zone	Interval (m)	Gold Grade (g/t Au)	Silver Grade (g/t Ag)	Notes
PC25-154	Perry Vein	1.59	11.5	6.2	High-grade vein within 22.47m @ 3.05 gpt Au
PC25-136	Perry Vein	4.91	9.2	N/A	High-grade vein intercept
PC22-XX	N/A	1.5	72.5	N/A	Metallic screen re-assay of high-grade sample
PC24-141	Rising Fawn	62.18	1.27	N/A	Bulk tonnage from surface
PC24-143	Rising Fawn	43.45	1.56	12.35	Bulk tonnage from surface
PC24-140	Rising Fawn	55.8	1.27	2.5	Bulk tonnage from surface
PRC21-85	Red Hills	115.85	1.34	5.78	Thick bulk tonnage intercept

Table 1: Philadelphia Project - Select Recent Drill Highlights

Building the Pipeline: Strategic Optionality and Future Growth

To ensure long-term growth beyond its flagship Philadelphia project, Arizona Gold & Silver has built a strategic pipeline of secondary assets, providing significant upside potential at minimal cost.

The company employs an intelligent "prospect generator" model for these projects, aiming to find partners to fund high-risk exploration. This strategy allows the company to retain exposure to a major discovery without diluting shareholder value or diverting capital from its primary focus. This approach demonstrates a disciplined and mature strategy for creating value.



Key portfolio assets include:

- **Sycamore Canyon (Arizona)**: A high-grade Arizona project acquired for $40k, now seeking a partner for low-risk, partner-funded exploration.
- **Silverton Gold (Nevada)**: Low-cost Nevada project with a large, untested anomaly in the Carlin Trend offers company-making discovery potential.

This two-pronged pipeline of secondary assets gives Arizona Gold & Silver valuable strategic optionality. It complements the advanced-stage Philadelphia project with both a near-term partnership opportunity and a long-term, high-impact discovery play in a top mining jurisdiction.

Project Name	Location	Deposit Type	Ownership	Current Status	Stated Strategy/ Next Steps
Philadelphia	Mohave County, AZ	Epithermal Au-Ag	100%	Advanced exploration; consistent drill success; positive metallurgy; permitted for next phase.	Advance to maiden NI 43-101 resource estimate; continue expansionary and infill drilling.
Sycamore Canyon	Graham County, AZ	Epithermal Au-Ag	100%	Undrilled; high-grade surface samples; drill plan initiated with USFS.	Seek venture partner to fund initial exploration drilling, preserving AZS capital for Philadelphia.
Silverton Gold	Nye County, NV	Carlin-type Au	Option	Large geophysical anomaly identified; drill permit extended; analogous to Long Canyon deposit.	Maintain project in good standing as a long-term, high-potential discovery option.

Table 2: Project Portfolio Overview

Fueling the Drill Bit: Financial Health and Corporate Structure

Arizona Gold & Silver is underpinned by a strong financial position and a corporate structure that aligns management with shareholder interests. The company maintains a relatively tight capital structure and a modest valuation, positioning it for significant growth as it advances its projects. A key strength is the high level of insider ownership, ensuring that management is strongly motivated to create shareholder value. This is powerfully endorsed by the presence of sophisticated institutional investors, including the renowned Sprott Group, whose investment serves as a significant third-party validation of the company's assets and strategy. The company has demonstrated a robust ability to fund its operations, successfully closing oversubscribed financings even in challenging markets. With a healthy treasury, no debt, and strong short-term liquidity, Arizona Gold & Silver is well-funded to execute its current exploration program and deliver on its next major catalyst—the maiden resource estimate—from a position of financial strength.

Capital Structure Metric	Value / Percentage
Shares Issued & Outstanding	~96.8 million
Warrants Outstanding	~25.2 million
Options Outstanding	~8.7 million
Fully Diluted Shares	**~130.7 million**
Market Capitalization (July 2025)	~C$31.5 million
Insider & Advisor Ownership	~23%
Key Institutional Ownership	9% (including 8% by Sprott)

Key Financial Highlights:

- **Aligned Shareholder Base**: Insiders and advisors hold a substantial stake of approximately 23%, with institutional ownership at 9%.
- **Tight Capital Structure**: The company has approximately 96.8 million shares issued and outstanding.
- **Healthy Balance Sheet**: As of late April 2025, the company had a strong treasury of $3.24 million and carried no debt.

Future Outlook

Arizona Gold & Silver is focused on delivering major catalysts to transition from a speculative explorer to a resource-defined developer. The investment case balances the company's strong execution and validated geology against the inherent risks of junior mining, like financing and permitting. The opportunity lies in a potential market re-rating as key milestones are achieved, as the current valuation may not fully reflect the fundamental progress made.

The company's near-term horizon is defined by several value-driving events:

- **Maiden Resource Estimate:** The primary objective for the Philadelphia Project within the next 12-18 months. This will be the first official quantification of the deposit's size and grade.
- **"Blue-Sky" Exploration:** Drilling high-impact targets, like the "boiling zone" theory at the Red Hills target, to test the ultimate scale of the mineralizing system.
- **Corporate Milestones:** Securing a joint venture partner for the Sycamore Canyon project and advancing Philadelphia towards a Preliminary Economic Assessment (PEA) after the resource is defined.

For investors with an appropriate risk tolerance, the company presents a compelling opportunity ahead of its most significant potential value inflection point.
